

# Assessment of Sea Ice and Ice Sheet Elevation Change in Antarctic Region Using ICESAT

Remote Sensing Class Project

Instructor: Dr. XIE

Ph.D Student: Burcu CICEK

*2005, UTSA*

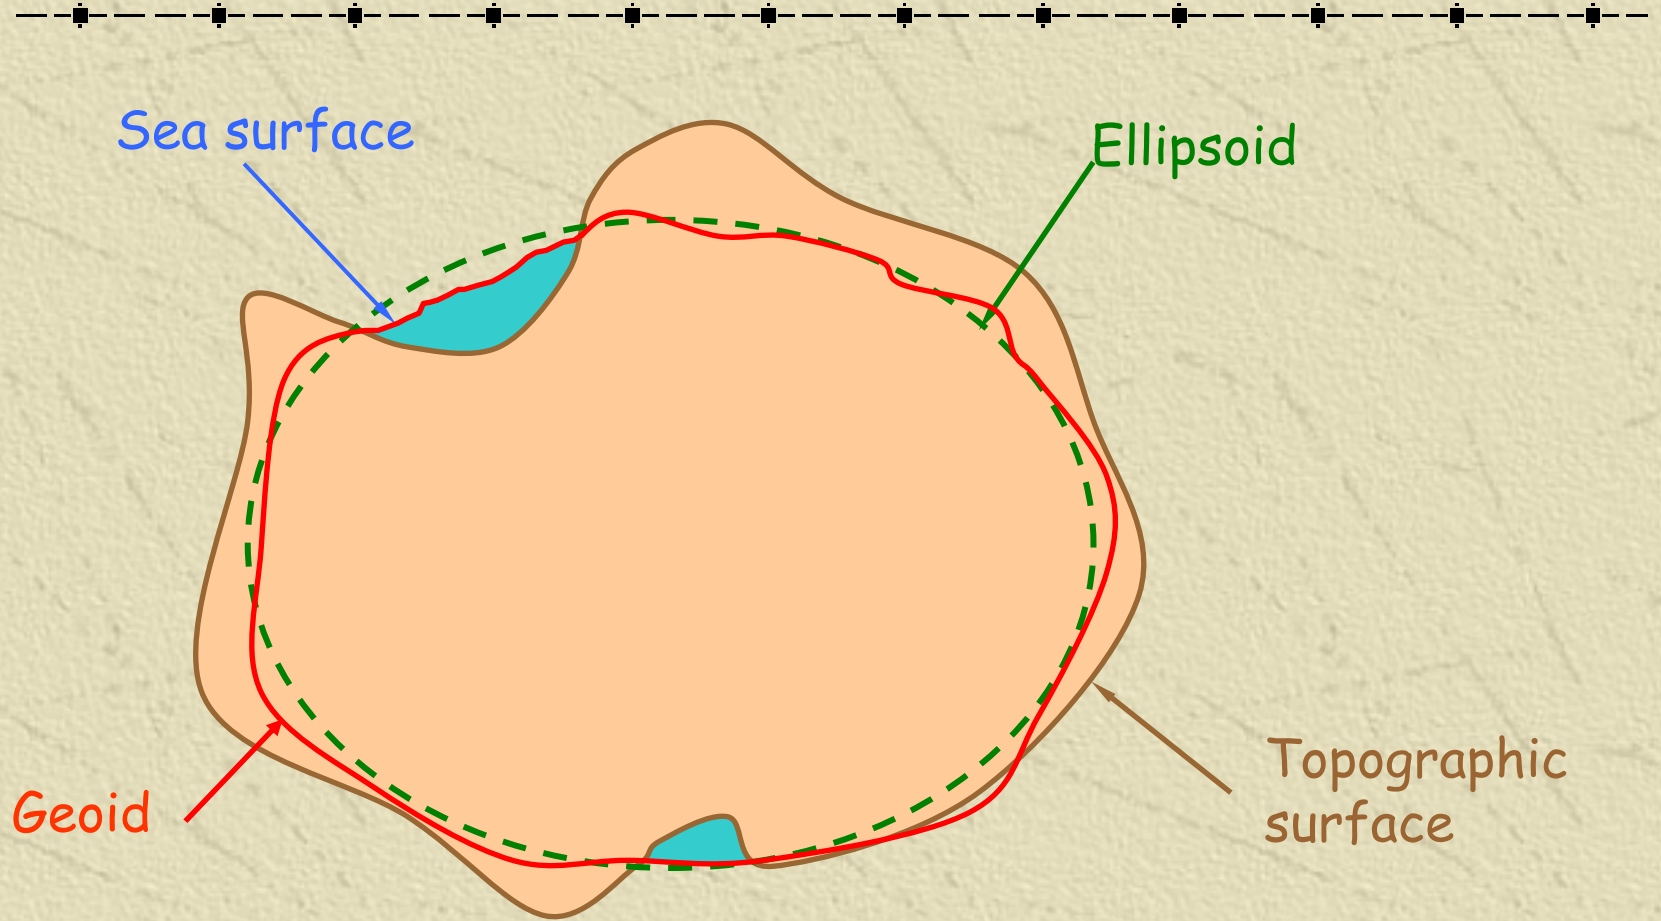

# SCOPE

1. **Why** is ice elevation change important?
2. **Where** is the focus area?
3. **How** and **What** could we use to detect changes?
4. **Results** so far?

# 1. Why?

# Earth Surfaces

**Geoid** is a surface of constant gravity.

# 1. Why?

# Elevation

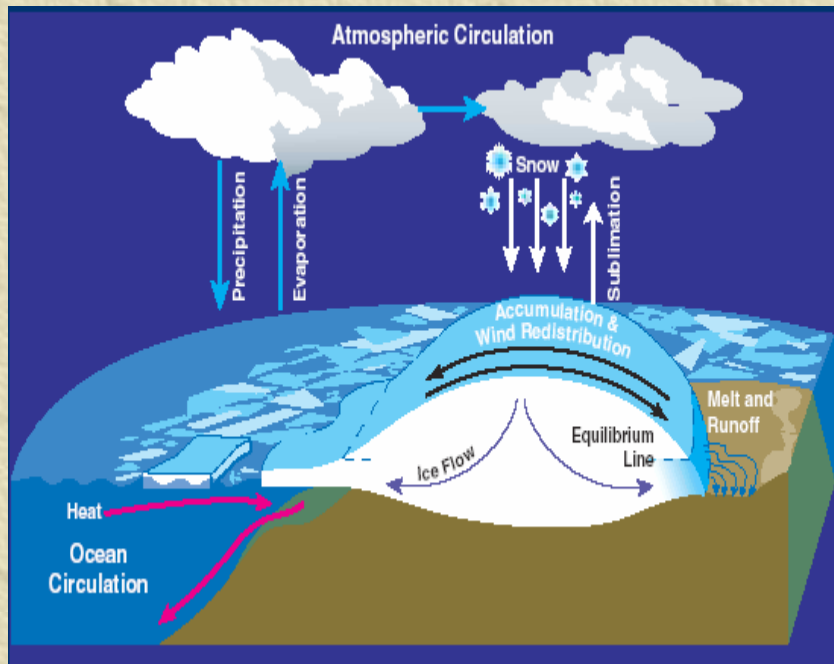

Elevation is measured from the Geoid

## 2.Where?

# West & East Antarctic

- Greenland: ~7 meters
- West Antarctica : ~5 meters
- East + West Antarctica: ~70 meters

## 2.Where?

# Ross Ice Shelf

The Ross Ice Shelf is larger than the state of Texas. Three years ago, the Ross Ice Shelf began shedding ice bergs.

## 2.Where?

# Ross Ice Shelf

Antarctica's Land and Ice Elevation

### 3. How?

# ICESAT

(GLAS) on ICESat is a "laser radar" that profiles the height distribution of clouds and aerosol particles in the atmosphere, along with the surface height.

### 3. How?

# ICESAT

ICESat captures Earth in Spectacular 3-D images

The data are helping scientists understand how life on Earth is affected by changing climate.

## 3-D Data from ICESat

### 3. How?

# ICESat Standard Data Products

---

## ✦ Seven Altimetry Products

- ◆ GLA01, GLA05-06, GLA12-15

## ✦ Six Atmosphere Products

- ◆ GLA02, GLA07-11

## ✦ Two Engineering Products

- ◆ GLA03-04

### 3. How?

# ICESat Standard Data Products

Short Name	Long Name	File size	Granules per day
GLA01	L1A Global Altimetry Data	9 MB	56
GLA02	L1A Global Atmosphere Data	671 MB	7
GLA03	L1A Global Engineering Data	19 MB	7
GLA04	L1A Global Laser Pointing Data	2 MB - 386 MB	7
GLA05	L1B Global Waveform-based Range Corrections Data	25 MB	56
GLA06	L1B Global Elevation Data	7 MB	56
GLA07	L1B Global Backscatter Data	827 MB	7
GLA08	L2 Global Planetary Boundary Layer and Elevated Aerosol Layer Heights	7 MB	1

### 3. How?

# ICESat Standard Data Products

---

GLA09	L2 Global Cloud Heights for Multi-layer Clouds	82 MB	1
GLA10	L2 Global Aerosol Vertical Structure Data	289 MB	1
GLA11	L2 Global Thin Cloud/Aerosol Optical Depths Data	13 MB	1
<b>GLA12</b>	<b>L2 Global Antarctic and Greenland Ice Sheet Altimetry Data</b>	<b>104 MB</b>	<b>1</b>
<b>GLA13</b>	<b>L2 Global Sea Ice Altimetry Data</b>	<b>107 MB</b>	<b>1</b>
GLA14	L2 Global Land Surface Altimetry Data	209 MB	1
GLA15	L2 Global Ocean Altimetry Data	279 MB	1

### 3. How?

# ICESAT

- 
- ✦ Ordered Data (NSIDC – for Winter & Summer)
  - ✦ Raw Data (binary) converted to txt. (IDL readers)
  - ✦ Text document is subsetted by Labview
  - ✦ GIS (ArcMap)

### 3. How?

# Ground tracks to surface: GIS-Interpolation

---

- ✦ **IDW**: IDW assumes that the surface is being driven by local variation. IDW uses a simple algorithm based on distance.
- ✦ **KRIGING**: forms weights from surrounding measured values to predict values at unmeasured locations. Kriging methods depend on mathematical and statistical models. Kriging weights come from a semivariogram that was developed by viewing the spatial structure of the data.
  - ◆ Ordinary Kriging (unknown mean of elevation)
  - ◆ Simple Kriging (known mean of elevation)

### 3. How?

# Evaluations of different methods

- ✦ Mean prediction error should be near zero, the mean standardized error should be near zero
- ✦ The smaller the RMS (root-mean-square) prediction error, the better
- ✦ Uncertainty of prediction standard errors: average estimated standard error versus RMS prediction error.
  - equal, good
  - larger than RMS, overestimate
  - less than RMS, underestimate

or RMS standardized error

  - =1, good,
  - <1, overestimate
  - >1, underestimate

### 3. How?

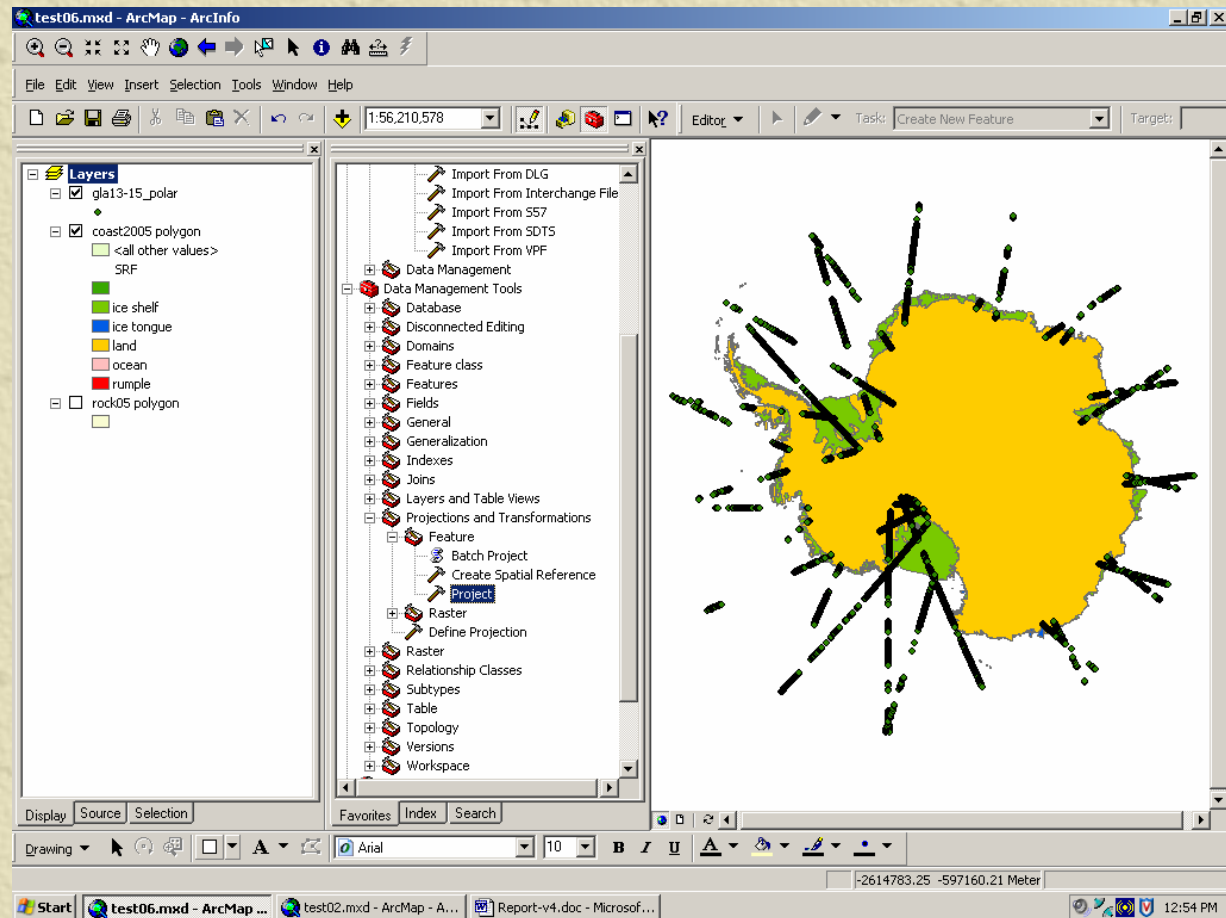

# Calculation Of Mean for Study Area

- ✦ DEM download from NSIDC
- ✦ Get the average elevation of the study area (539 m)

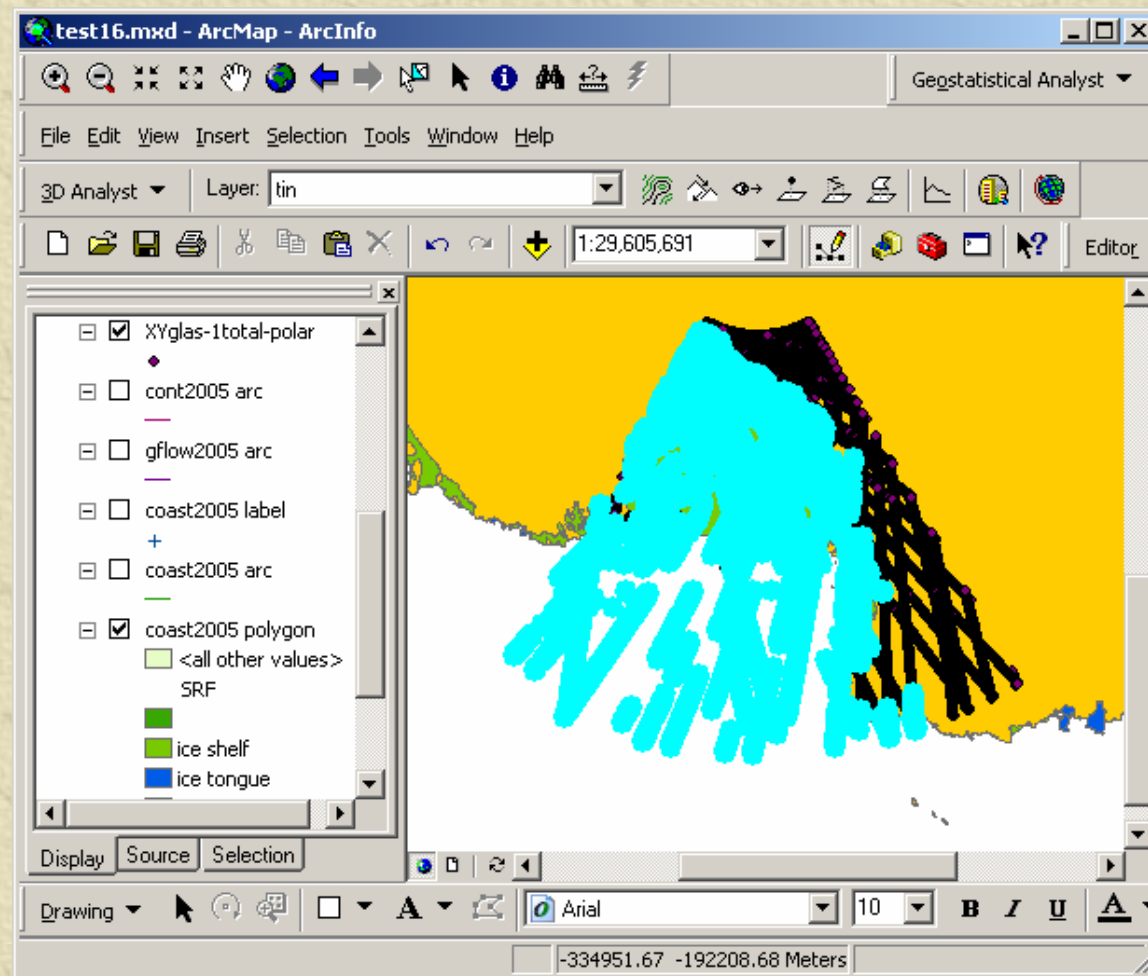

## 4. Results?

# ICESat ground tracks in one day

## 4. Results?

# ICESat ground tracks in 9 days

## 4. Results?

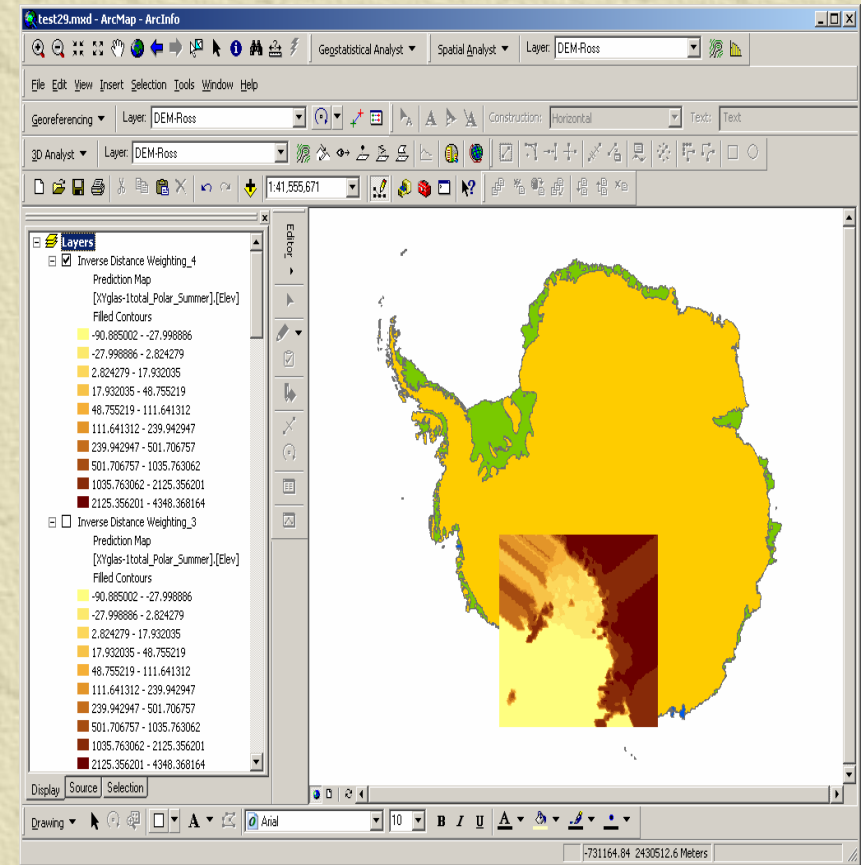

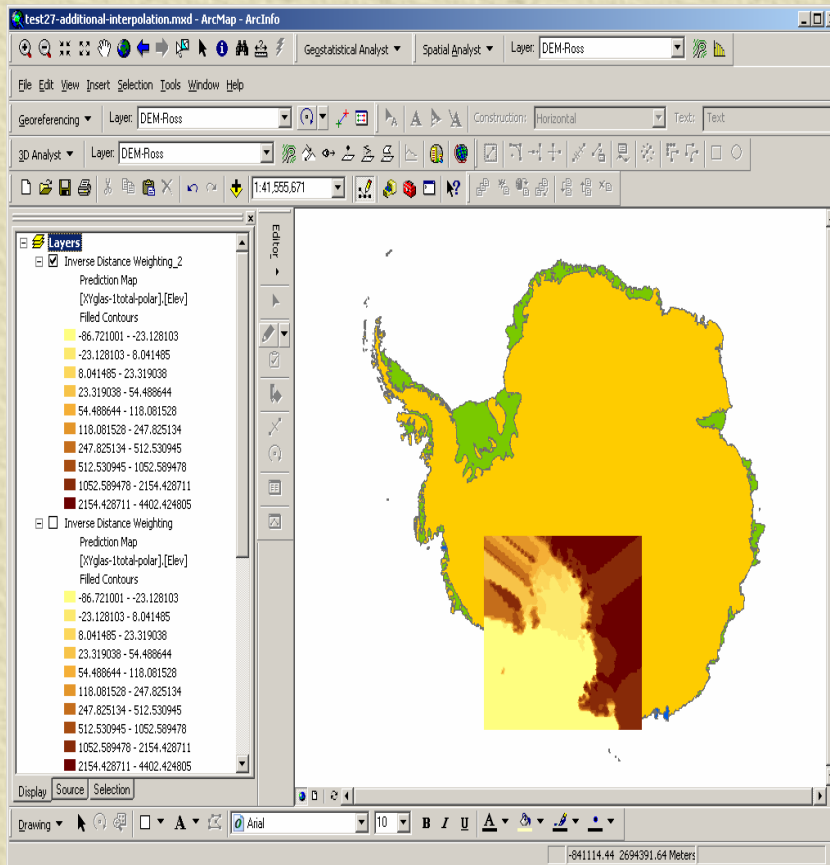

# Surface of Interpolation

### IDW-Winter

### IDW-Summer

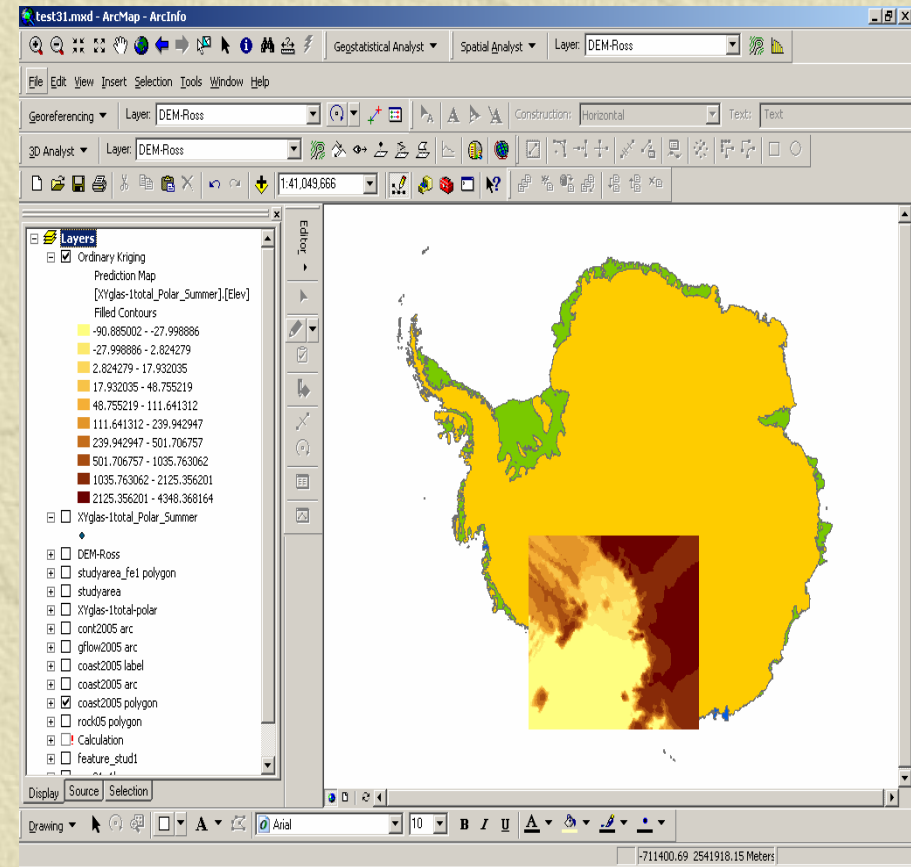

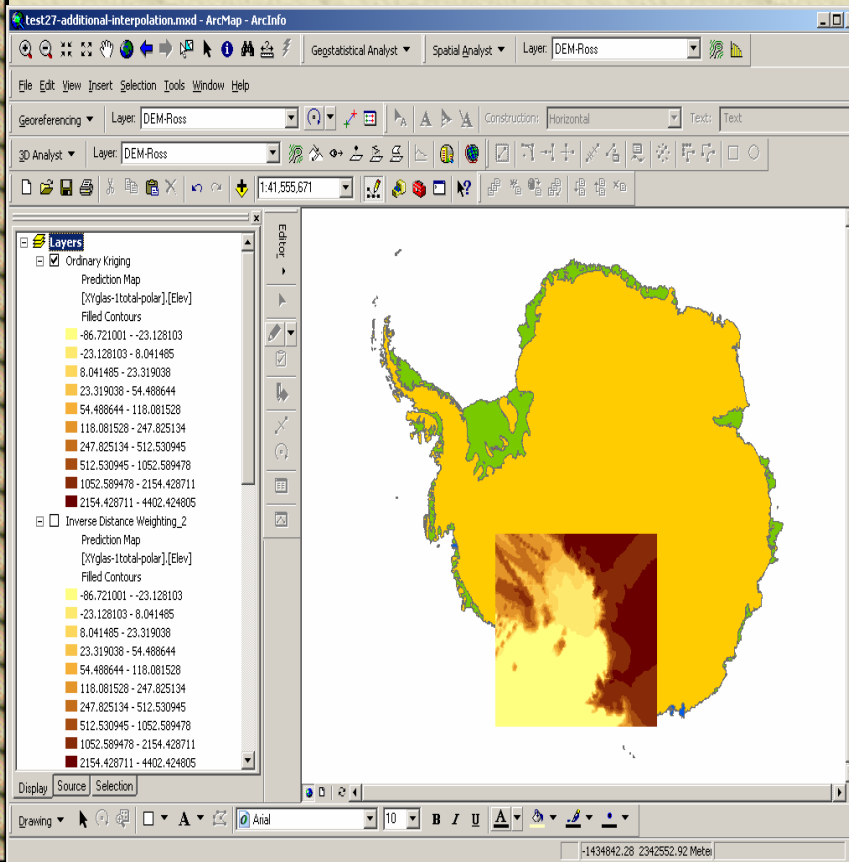

## 4. Results?

# GIS-Interpolation (4. What?)

✦ Ordinary Kriging-  
Winter

✦ Ordinary Kriging-  
Summer

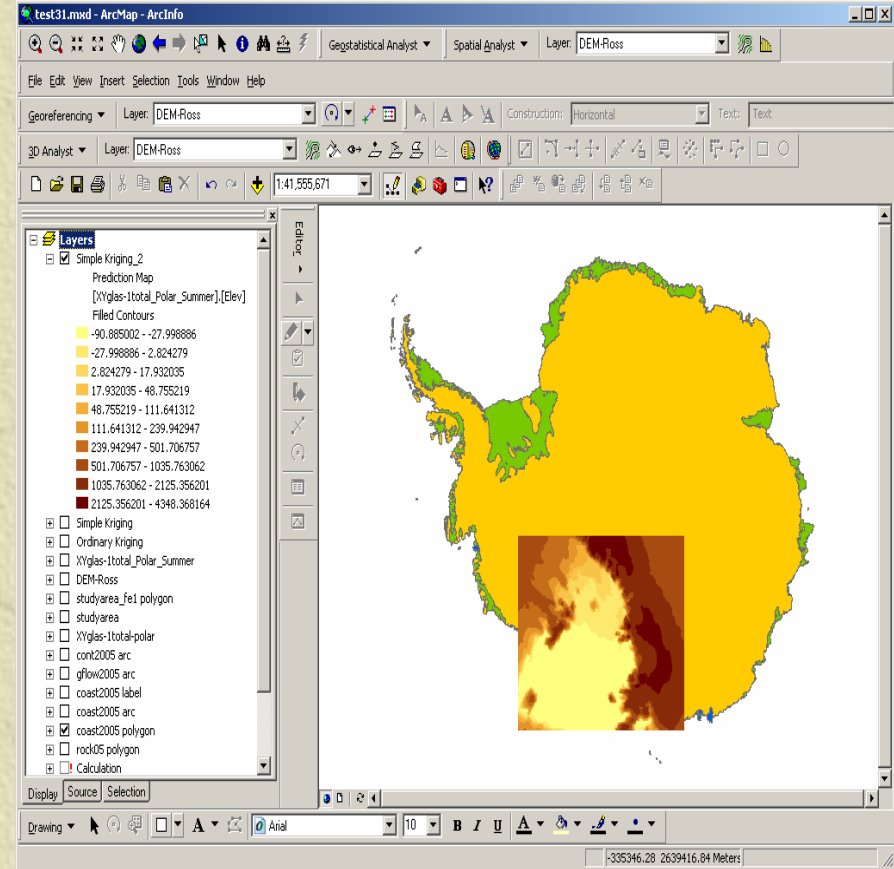

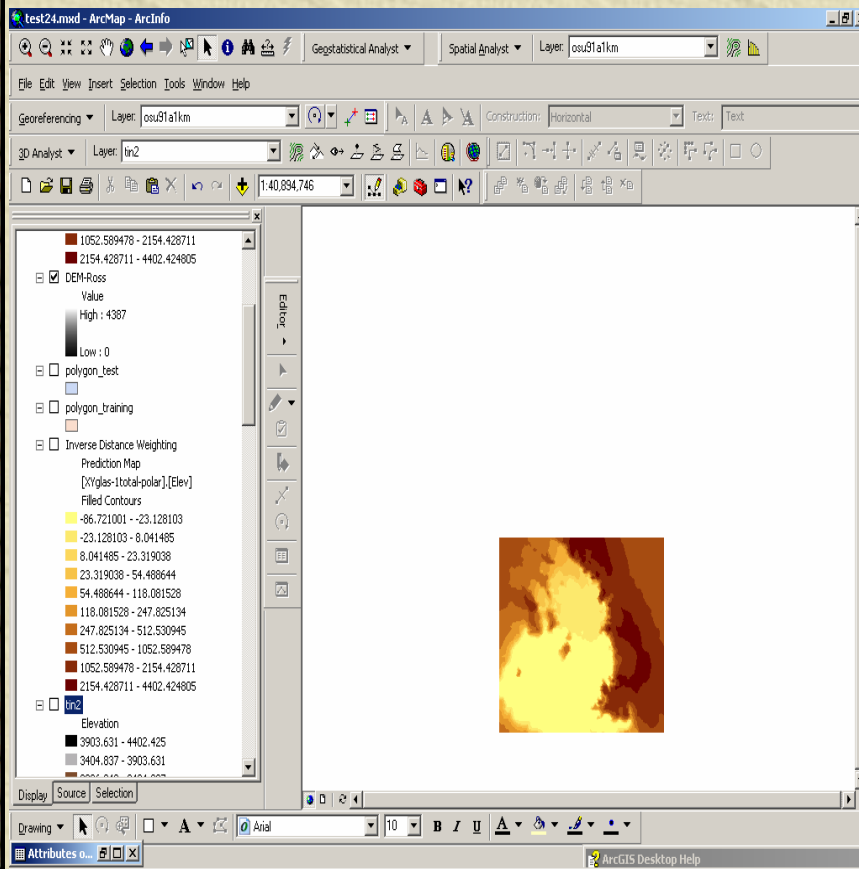

## 4. Results?

# GIS-Interpolation (4. What?)

✦ Simple Kriging-  
Winter

✦ Simple Kriging-  
Summer

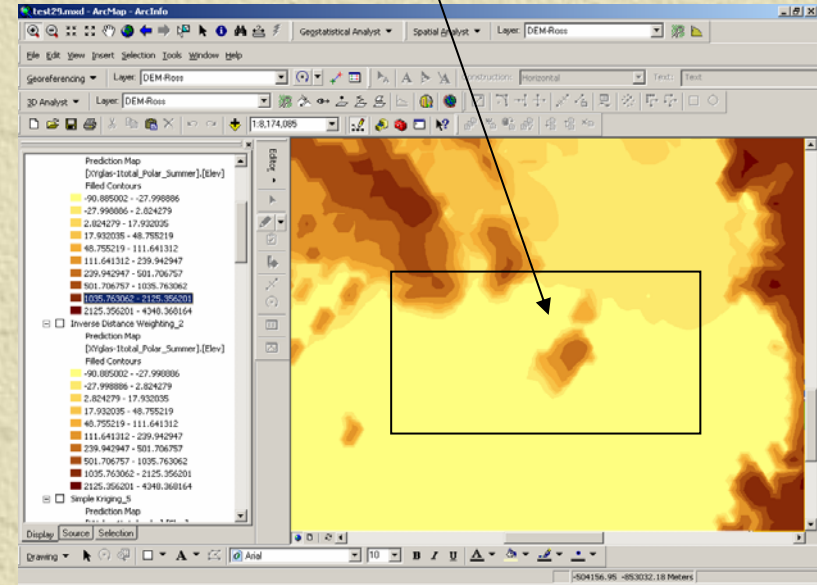

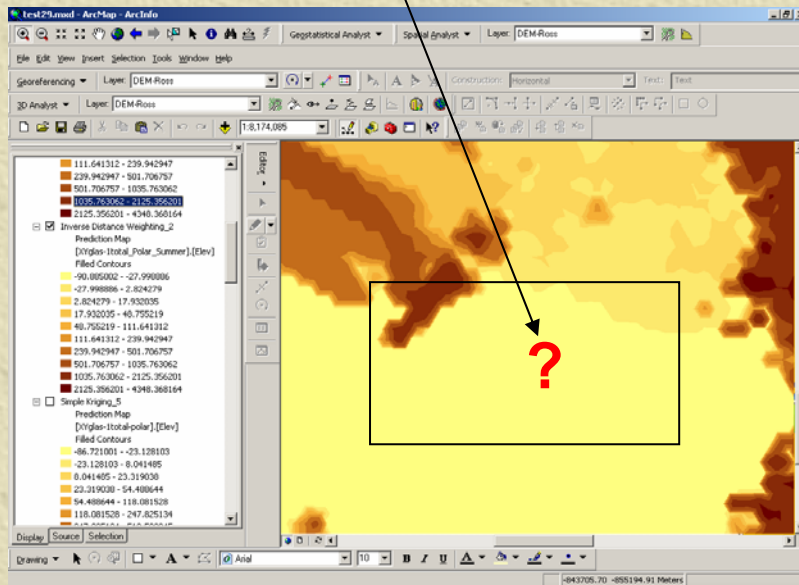

## 4. Results?

# Winter iceberg was missed by the IDW method

IDW

Ordinary Kriging

## 4. Results?

# Parameters of Simple Kriging

---

Simple Kriging (1)	1047.4/Neighborhood	5	2	K1
Simple Kriging (2)	539/Neighborhood	5	2	K2
Simple Kriging (3)	1047.4/Neighborhood	10	2	K3
Simple Kriging (4)	539/Neighborhood	10	2	K4
Simple Kriging (5)	1047.4/Neighborhood	10	10	K5
Simple Kriging (6)	539/Neighborhood	10	10	K6
Simple Kriging (7)	1047.4/Neighborhood	15	10	K7
Simple Kriging (8)	539/Neighborhood	15	10	K8

## 4. Results?

# Simple Kriging Results

Winter Data, Simple Kriging, Mean Prediction Errors for Different Methods

Excel-Winter

Winter Data, Simple Kriging, Root-Mean Square of Prediction Errors for Different Methods

Winter Data, Simple Kriging, Root Mean-Square Standardized of Prediction Errors for Different Methods

Winter Data, Simple Kriging, Average Standard Prediction Errors for Different Methods

Winter Data, Simple Kriging, Mean Standardized of Prediction Errors for Different Methods

## 4. Results?

# Simple Kriging Results

Winter Data, Simple Kriging, Mean Prediction Errors for Different Methods

Excel-Summer

Winter Data, Simple Kriging, Root-Mean Square of Prediction Errors for Different Methods

Winter Data, Simple Kriging, Root Mean-Square Standardized of Prediction Errors for Different Methods

Winter Data, Simple Kriging, Average Standard Prediction Errors for Different Methods

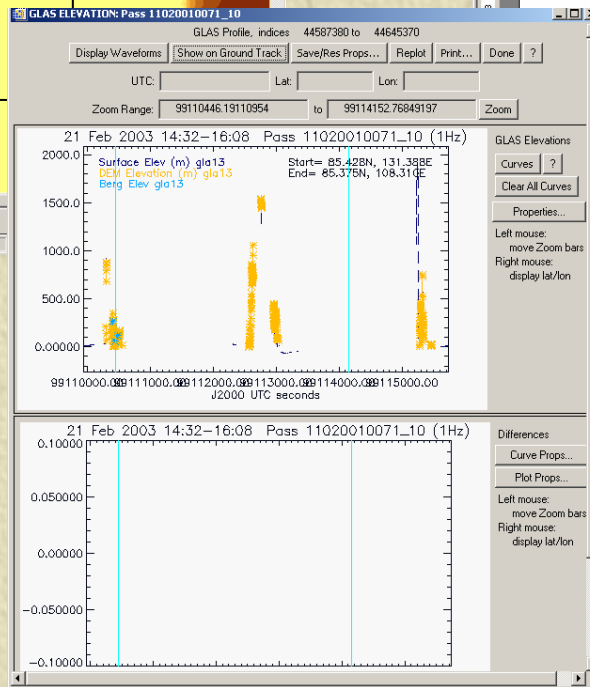

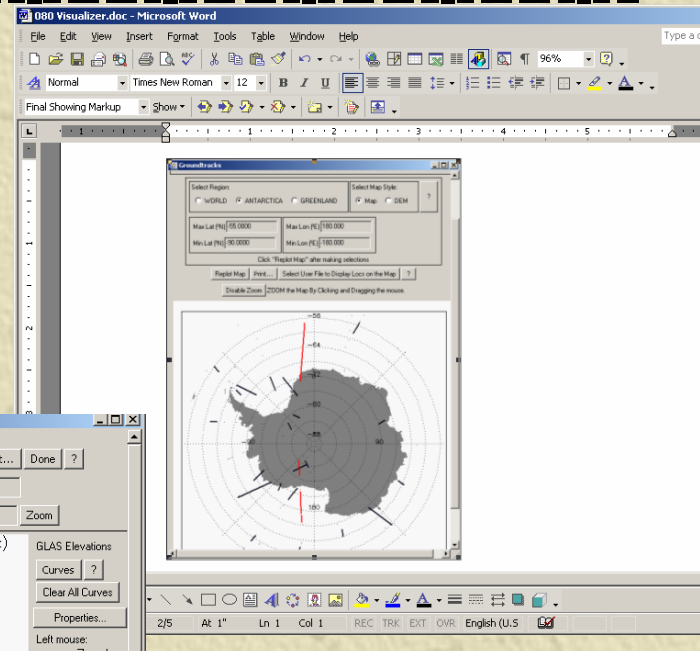

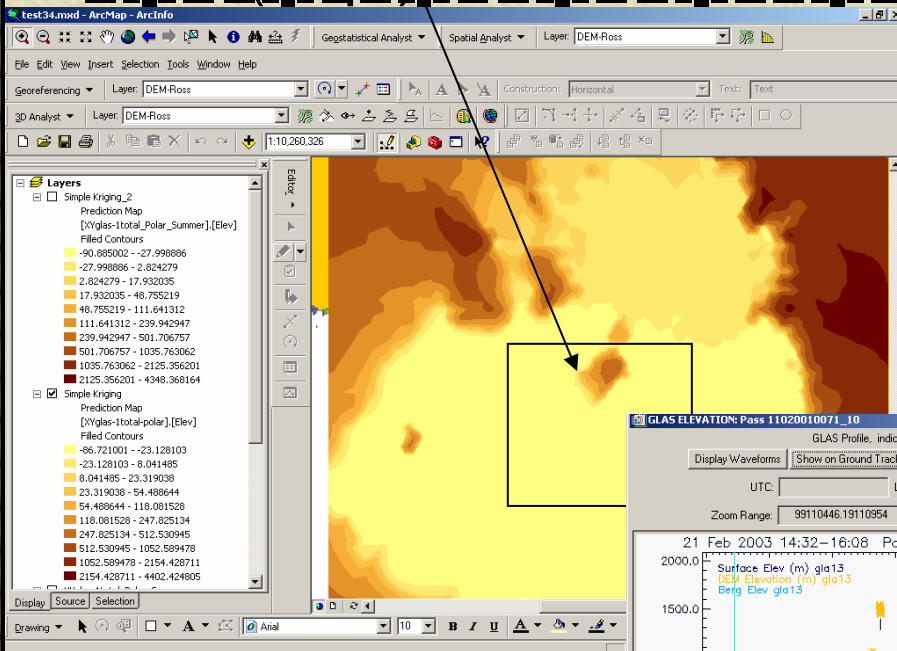

Winter Data, Simple Kriging, Mean Standardized of Prediction Errors for Different Methods

# 4. Results?

# Comparison of Summer & Winter

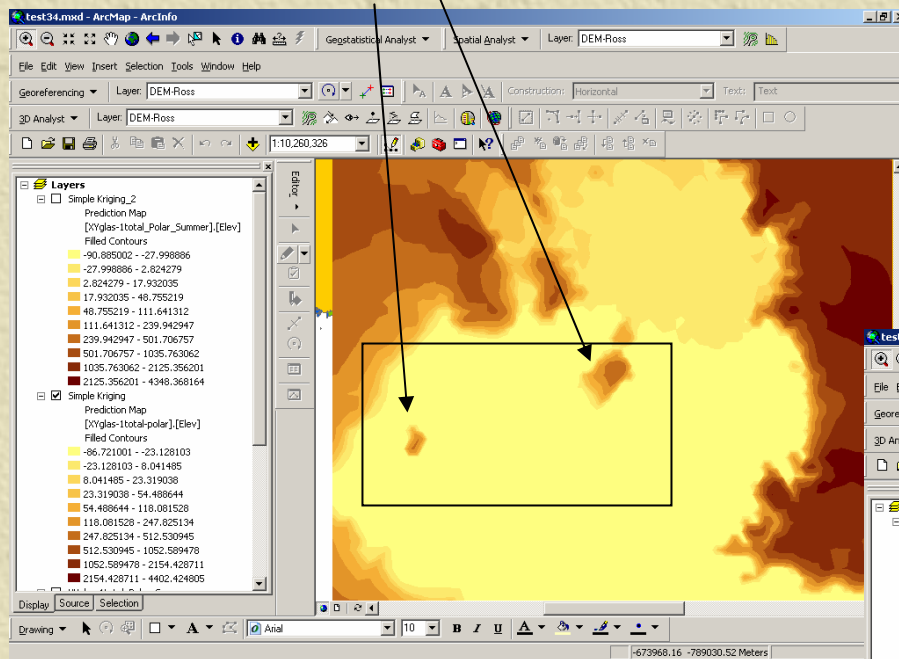

## Winter (Sept) -2003

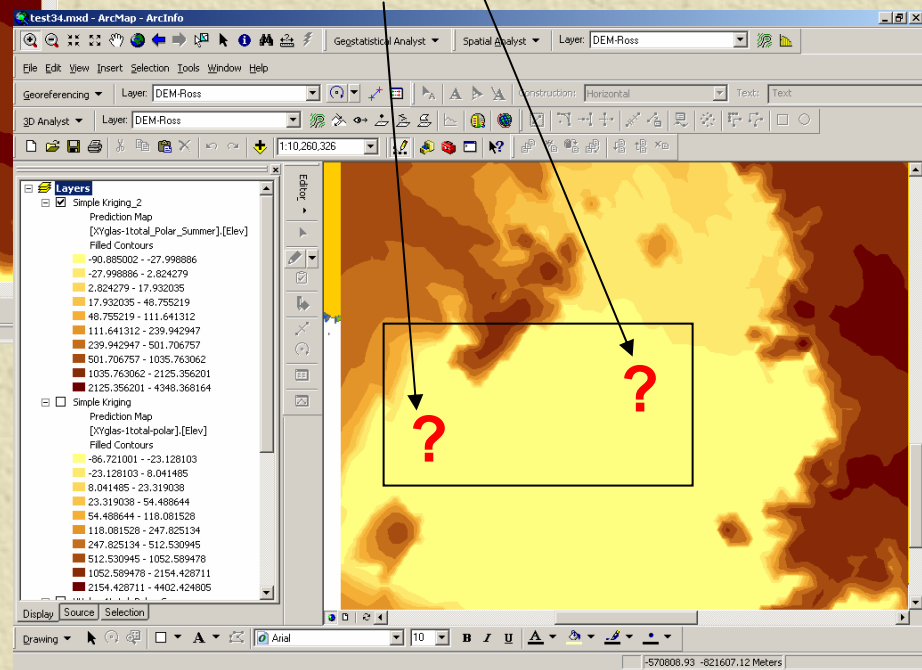

## 4. Results?

# Comparison of Summer & Winter

Winter (Sept) -2003

Summer (Feb)-2003

# Conclusion

- 
- ✦ Simple Kriging produced better surface for this study.
  - ✦ Sea ice cover minimum reduced about 6-7 meters during summer time
  - ✦ Ice Land decreased minimum 20 meters during summer time

# Future works

- 
- ✦ Time Series
  - ✦ Compare with MODIS, AMSR-E, ERS-1&2
  - ✦ Crossover analysis; calculating the difference in elevation between an ascending and descending pass when it crosses over the same location but is separated temporally
  - ✦ Validation with GPS data

***Thank you...***

**The End**
