Learning Module

A learning module is an organized collection of content presented together. Learning modules are shells in which other content items such as files, folders and tools are added.

Add Learning Module to Content Area

A Learning Module is a set of content that includes a structured path for progressing through the items.

1. Change Edit Mode to ON and access a content area or folder.
2. On the action bar, point to Build Content and click Learning Module.
3. On the Create page, type a Name. Specify the settings and options.

Navigating Within Learning Modules

To move from page to page within a module, click the right and left arrow buttons on the top right of the content area.

The arrow appears next to the "Page 1 of 3" text.

The name of a folder or sub-folder counts as a page. For example, if the learning module contains two folders, each containing one file, you can access a total of four pages.

You can also navigate by clicking the name of a page in the table of contents instead of clicking the forward or back arrows.

Using the Table of Contents

The table of contents displays next to the course menu on the page. You can a move the table of contents below the learning module content area to make more space across the page.
There are three display options available on the header of the table of contents:

- Minimize
- Maximize
- Move to the bottom or the left

**Add Content Folder to Content Area**

Within a course area, you can create containers to further organize your course materials. For example, within a single content area, you can create eight folders—one folder for each unit in your textbook.

A Content Folder is a course area that contains content items. Folders allow content to be structured with a hierarchy or categories.

1. Change **Edit Mode** to **ON** and access a content area or folder. On the action bar, point to **Build Content** and click **Learning Module**, **Lesson Plan**, or **Content Folder**.
2. On the **Create** page, type a **Name**. Specify the settings and options.
