How to Add a Network Printer on a Mac Using the IP Address

1. Go to the apple in the top left corner of the screen.

2. After selecting the apple, select System Preferences.

3. After selecting System Preferences, select Printer & Scan.
4. After selecting Printers & Scanners, select the “+” sign to add a printer.

5. Select the **IP** tab in the address field, and input the IP address for the network printer. In the name field change the name for the network printer. Select **Add** to set up printer.
6. After choosing Select Printer Software, in the search field type the name of the network printer, select the correct printer driver for the model of the network printer, and click **OK**.
7. After selecting OK, select Add.

8. The computer will load device drivers for the requested printer.
10. After selecting OK, you will have successfully installed a network printer.
