The Earthquake can be Predicted using Satellite Thermal Infrared Images

ZuJi Qiang, Institute of Geology ,China Earthquake Administration Chinese have carefully recorded earthquake data for the past several thousand years.

 In 782 B.C. (The Chou Dynasty while King You ruled China), "There was severe drought, then big earthquake: rivers were cut off, mountains were shaken."

 Historical earthquake data has shown that pre-earthquake temperature increase occurred before about one third of the earthquakes recorded by ancient Chinese. Russians, Dr. V. Gorny., A. Salman.. etc., were among the first to discover the isolated pre-earthquake thermalinfrared temperature increase anomaly using satellite technology in 1988.

 Three Hypotheses of the Precursor of the Satellite Thermal Infrared Anomalies

(1)"Red Swelling" Hypotheses, by Academician Fu Chengyi,1971

1, The records of Guanting Reservoir Seismological Station, Beijing, are usually interfered by the high-frequency pulses produced by trains passing nearby bridge. But during the periods of Baotou earthquake of November 1970 and Changshan Islands earthquake of January 1971 with 5-6 magnitude, such interference disappeared. This phenomena

proves that before a middle strong earthquake, the affected area of the upper crust may stretch at least several hundred kilometers.

2,Before a lager earthquake ,the occurrences of small earthquakes in a relatively wide area decreased dramatically ,and transient pacific period appears.

3,Some earthquake precursors such as ground water anomaly ground tilt, crust strain, geoelectric resistivity, and anomalous animal behaviour sometimes may appear in places far from epicenter. If an earthquake was caused only by fracture of rocks ,such phenomena would occur magnificently only around the area near the epicenter.

4, Gravity of the moon and sun triggers an earthquakes sometimes. While the gravitational force is a kind of body force. It affects on rocks at both sides of a fault nearly equally. If earthquakes originated only From a small area near a fault, it is hard imagine that the gravitational force could trigger an earthquake. Only when this force affects a very large volume of the crust, could the gravitation force produce enough distortion .

(2),The Gas-thermal Hypotheses by Zuji Qiang

Gas-Thermal Hypothesis

Rocks under stress terrestrial degassing emission of CH₄,CO₂ and charged particles solar radiation, electric field excitation thermal infrared temperature increase.

•Experimental results

Experimental Results under the Condition of External Loading Electric Field

Experimental results under the condition of external loading electric field

Temperature measurements of the air, CO_2 , CH_4 , H_4 and the mixed gas of CO_2 and CH_4 with a given concentration are performed in the external loading of 4000 volt electrostatic field. The results are listed in Table 1.

No.	Experimental gas	Temperature before _ loading electric field	Temperature after loading electric field		
			Constant electric field	Transient electric field	Change
1	gas with 8.15% of CO2	28. 2°C	28. 2 C	32.0°C	3.8°C
2	gas with 8.15% of CO ₂ and 11.4% of CH ₄	28. 9°C	28. 9 C	35.0°C	6. 1°C
3	gas with 3.8% of CH4	28.8 C	28.8°C	34.0°C	5.2°C
4	gas with 1.52% of CH4	28.50	28. 5 °C	32.0°C	3. 5 °C
5	normal air	28.8 C	28. 8 C	31.4°C	2.6°C
6	gas with 5.3% of He	26. 2 C	26. 2 C	26. 8°C	0. CC

Table 1 Temperature change of gases under the action of external transient electric field

It can be seen from Table 1 that the temperature of each kind of gas all goes up, and the normal air temperature also goes high under the action of transient electric field, but the increasing temperature of He is only 0.6 C. The temperature increasing range becomes larger with the increasing of content of CH₄ and CO₂ in the air. But the temperature of each gas does not go up in the loading direct current field and no transient action of electric field.

The Curve of Gas Release Photon

According to Table 1 of experiment one and Fig. 1 of photon radiation surveyed by the photomultiplier in experiment two, gases can cause photon radiation and temperature increase under the effect of instantaneous electric field. Photon radiation is not continuous but pulsating, as illustrated in Fig. 1. No photon is released when the electric field rises, but during the fall of the electric field, it produces photon radiation. In addition, we observed that the number of photon radiated was fluctuating during the sudden fall of electric field. This means that the CO_2 gas may gain enough energy or not during this period. This phenomenon is similar to that observed by the satellite through the infrared temperature measurement before an earthquake.

Natural Radioactivity, Earthquakes and the Ionosphere by Sergey Alexander Pulinets, University of Mexico.

Fig. 1. (top) IONEX total electron content (TEC)—a special code that generates global maps of the vertical TEC using data from 150 GPS receivers distributed globally—as measured 2 days before the Sumatra earthquake of 26 December 2004 (modified after Zakharenkova et al. [2006]). (bottom) In situ ion density distribution measured onboard the DEMETER satellite 6 days before the Sumatra earthquake of 28 March 2005. Lower plasma concentration is indicated by darker shading. Bursts indicate the position of the epicenter of the impending earthquake.

Fig. 2. Analysis of GPS TEC data for a network of GPS receivers in California for the period of October of 1999. (top) The grey curve indicates maximal TEC values for the set of stations under analysis. The solid curve indicates minimum TEC values for the set of stations under analysis. (middle) The thin grey curve is the variability index, the difference between the maximum and minimum values presented in the top panel. The solid curve is the running (96 points) average. Arrow indicates the moment of seismic shock. (bottom) Global equatorial index of geomagnetic activity (Dst index) for October 1999. Note the increase of the variability index (middle panel) on 10 October, 6 days before the seismic shock. The index does not grow after strong geomagnetic storm (near -250 nanoteslas) on 22 October (Dst index, bottom panel).

б

Fig. 5. Schematic representation of a mineral surface to illustrate the processes that may take place when p-holes (h) arrive at the surface (left). When the two p-holes recombine, recombination energy is released, leading to a vibrationally highly excited O-O bond, which can de-excite radiatively by emitting IR photons characteristic of transitions the energy levels of the O–O bond, and nonradiatively by channeling energy into neighboring bonds (right).

Of particular interest to the IR emission is the fact that it costs energy to break a peroxy bond. This energy is expended in the stressed rock volume in the form of mechanical work dispensed during plastic deformation. If the p-holes recombine at the surface to restitute peroxy bonds, some of this energy will be regained. However, this recombination energy will be deposited into the newly formed O⁻-O⁻ bonds, causing them to be "born" in a vibrationally highly excited state.

The Birth of a New Method on Earthquake prediction

 The anomalous temperature increase before an earthquake has been recorded in China long ago.Outgassing of the earth before earthquake was recorded A.C.2000a in China at Zhou Yi.

Practice is the only criteria to examine a truth.

 I am confident that precursors can be found before an earthquake and that earthquake prediction IS possible.

Best Practice The Several Examples: •QiQi EarthquakeM7.6 Lijiang EarthquakeM7.0 Gonghe EarthquakeM7.0 Tainan EarthquakeM6.0 Hualian EarthquakeM6.8 Changshou EarthquakeM5.1 JiashiEarthquakeM6.6 Tangshan EarthquakeM4.7 ShaheEarthquakeM4.0
Earthquake precursors should enable a predicator to give the three elements of a future earthquake: (place, magnitude and time) (Max Wyss, 1993, former chairperson of Earthquake Prediction Committee, IASPEI.

江苏常熟 太仓5.1级地震 的监测预报和现场工作

学立期 (国家地说局科社监测词) (1990分子子题)

T Bà

本文宗要合称了江苏发热-太会5.1级地震的监测领核与现场工作,内容在然此实会放为 密联指度,震灾讨论及现场工作,以及地震自后的领测领核。

1990年2月10日波县、江苏省常热以东发 坐了一次5.1级地震, 该地震发生在 我 团人口 积密、经济设法的长江三角两地区,放发周期 十几个大小城市,社会影响比较大,引起了各 级政府的极大关注。她震出关上午国家地震局 力線順局長即來专家 4 人紅長雲区, 会同江苏 省人民政府吴锡军副省长等一起禀重尖情,对 实区人民表示亲切照问并指导抗震振灾工作。 重后一个牛小时江苏省地震局即派出科技人员 身赴现场:上海市、浙江省地震局在先后赶到 现场、她跟现场的印多名地震工作者在统一册 挥下,并然有序地开展了众震监视频频,宏观 考察、重灾评估、社会经济调查、地震知识及 助重抗重知识宣传等综合地罪对策工作。为安 定民心,稳定社会秩序以及迅速恢复当地工会 业正常生产起到了积极作用。收到明显社会放 总并受到当地政府的好评

地震参数及公规则度

根据任券省地源局对31个区域台及传输台 间量料分析,以及每省10个台原相和动资料处理,得到这次地震的原源参数及实施机制解如 表1、表2。

经过税场等款, 输定宏规模中在雪额市与 太全县之间的沙溪多, 奥税规数中点约8-7 公里。秋润区在沙漠多的制经里沙老一段, 四 发达6歲, 六旗区呈东海坞, 长臻5公里, 短 站5.5公里, 总派和约25平方公里, 互宽区约 200平方公里, 合派和约25平方公里, 互宽区约

需灾评估及现场工作

现场采取统一标准,分类统计,抽样检查 等办法与与抽政府一方统计,结果是:

房屋破量共2.7万户,10万余税,其中严 里破坏风占3%,人员你亡夫20人,其中非三 常死亡3人,直赖受约3人,间部受约3人, 经济额失约1.3亿元,其中重 封抗房頭标造成 的模块约3.70%,多销金卖去20%。 一个中等现在的地质流量和扩大的服务。

党其原因有二。一是改革开放十年未苏南能

Certificate Of Prediction Accuracy issued by vice directo of department of Earthquake Prediction, CEA 回家地震局在接待以副出除二为团长的日本就 空宇宙工业会代表团时,白田取了"卫星热红 外诸温能兆——地震短临预程"、"派场红外岩 石磁奏家验研究"等专题介绍后,日本事人说, "都不到在利用载天技术方面。中国在地震研 或方面编述了我们"。

作为国家地靈局"人五"科技攻关项目,在 经费严重不足的 健皮下,该项研究器够取得 为世界同行标要的道强,这与国家科委高技术 司、国际科工委、地靈科学联合基金合,擬片中 华数窗科学基金会(份办)以及何隅企机天科技 人材培训基金合的大力支持密不可分;同时, 改革开放的政策在支持了巨大的作用。因家气 象局发扬大协作精神,不计温融地为研究人员 最供了大量的卫星面片资料。

目前,卫星色红外地里建晶作为此翼星后 前兆的研究正是初步的,仍有许多问题有效原 入研究,加云层于优问题,异常机制问题口及 扩大监视孔服问题等。我们保信,随着我派机 关推术的发展和科带人员的不懈努力,一定能 拿出高水子的研究成果,为人类利用机天拉木 对就地藏自然实实做出更大赏家;

(国家地震局科技监测司 李富麗

拉恰她震的追踪

斯特拉霍夫(B. H. CTPAXCE)

1991年4月29日发生的拉伯地震员高加 累整个地震展展历史上最强的地震。在地震区 内,过去一般没有限报过如此巨大能量的地震 (重级的为7级),明这次地震又一次流补了级 有的普通地震区如振的不足之处。

实际上,在1988年新庄塔众出最后就确 制了临时的高加来地震化脸话,参与偏制化器 的有,俄罗斯地球物理研究所及其他地质、地 偏研究所和外高加重地以有关机构的专家。在 这张圈上,大高加重的整个面貌都是地置的 重猛。而在主来地重用在的地区,那些告言坚 的拉哈和商集需季(00mm)。别如此了 长期的地震警报区,但是,由于在得到对某地 区强置的科学跟报时,还没有别见三具体的管 理机制,这便得政府不能为所须很的地震大事 做好座备。

也就是说,社会还不能在实际上利用此展 图程模域的科学结果(即使是不很交易的),这 就是投给地面的第一个数词。

这次地震过后已经很清楚,高加家已进入 地震的话医院,在近90年里(由1902年前着 马哈地震直后),这点没有发生过过时的纵谋。 然而,现在就在这里,3年内就发生了两点。

如果考虑新皮塔克和拉伯地展后大量的展始 算以及算比利斯东北方向100 km的1992 年 延慶,別元可置發,地球內面的地震激发這種 已经开始,而且它正在沿高加索地球逐漸扩展

在分析比累累顶的基础上,基础站要学家 得出结论,认为这层在不久的将来可能发生强 重。但是,由于苏奈的解体及普遍的政局不能 定,说一的区域出展自同分量了。数位对高加 常愿情不能进行完整的层面,因此,当时也未 后能够及时查班下次比赢的地点,这是拉他地 赢的第二个款识。

若于年前, 所位著名的美丽学者方, c. Contra 和 P. C. Dave 量推出"首"是黑的反批和, 这种地震的震颤与未出墨地面部地震动物的 目前有关, 拉拉地震着未就是出种"脑袋"能 震, 几个月的服斥工作结果, 以及俄罗斯, 畅 导音至, 张田, 英国和美国专家在集中区进行 的地质, 地球物质风质的结果都能呈明这一面

这里使用了最先进的供募参据完方能,将 未起找到火装制(此无力的头缝),就证法可能 导有投始地震的震源,但是,在施下4-19 km 一 和 一 Certificate Of Prediction Accu racy issued by vice director of department of Earthquake Prediction, CEA

国家地震局信息

国家地震局 一九九0年二月二十二日

熱紅外异常可望用于短脑地震预报

最近,国家地震局地质研究后在国家气象局卫星气象中心大力支持和怪动下,在利用热红外异常对地震作 级结照极方面取得了很有价值的进展。

利用热红外异常作短端地震预报的课题开始于去年 10月初。他们从总站研究1988年云南潮流地震入 手,结果在震湿对应关系上获得了新的认识。

正当他们潜心总结测论地震的时候,10月19日 至20日,在山西大阿发生了5、7级和6、1级地震。 他们便立即将注意力集中到大同地区,对大同地区热加 外实施监视。10月21日,大同地区再次出现热加杂 异常,他们就根据在研究测论地震所获得的认识和经验, 及时向所领导模出了"大同老虞区在近日內可能有5一 Certificate Of Prediction Accu racy issued by vice director of department of Earthquake Prediction, CEA 5,2 很余霞,第一次尝试获得了成功。

从今年2月1日始,在南黄海至苏北沿海一带,然 起外出现持续增温异常,经过他们几天的连续跟踪监视 和对比分析,当确信这一异常现象与大同地震前热红外 异常演变规律相类似之后,便当即向国家地震局有关率 位提出了"近日南黄海、苏北沿海一带将发生5-6级 中預地震,预报时间可延长到2月16日有效"的预想 意见。发出预报的时间是2月6日下午4点30分。2 月10日,江苏常熟以东发生了5.1 纸地中摇地震。 预根再次取得了成效。

由于上述预报意见是带有探索性和实验性的(高鬃 研究中的新方法),所以没有向外犀作正式预报。

专家们认为,如果再经历几次中、强地震的检验证 实该方法仍有成效,并在演变规律上作进一步的探索, 那么,热红外异常就可以成为地震短皓顶很中有希望的 一种方法。因而这一方法非常值得继续探索下去。

Certificate of Prediction Accuracy issued by Institute of Geology, CEA

别高,还要安排重要首长听取汇报,因务院缺少一个教灾的补助标准,一 股来的汇银团都有所收益, 而那些在基层忙于教灾的干部,由于失击反时 向中央汇报的时机,没有或较少得到中央补助的教灾款,有人形容这种现 象为"会哭的孩子多吃奶"。

这种无序的状态不能再继续下去了。因务委员际俊生要求制定加强抗 实教灾的条例,以便规范我因报灾、评估、补助的程序。这项工作由国家 经贸委组织实施,经贸委将其中抗灾教灾的分级负责标准交给我所十三室 及相关部门来完成。

兩年多来,在马案晋院士的领导下,十三室及相关部门的科研人员收 集了全国各地1978-1994年的5000多泰灾情和经济方面的数据资料,进行了 大量的测算。作了几百张图,首后完成了七镞,征集了许多邻门的意见, 并召开了两次全国性学术研讨会,将我国三十个省(自治区、直辖市)划 分成三类地区,每类地区都有八项申请补助的标准,凡达到其中两项标准 的,不用来京汇振,就可能得到中央给予的补助。相反地,达不到标准 的,即是来京,中央也可以不予受理。

为了协调中央有关部委的意见,因务院秘书局最近在中南海召开了会 试,我所有三名科研人员作为专家参加。有关领导在会上肯定了我所参与 的这项工作,表示不久将以此作为国务院的一项通知下发各地执行。 十三室 高建国

几次7级以上强震预报成功 ——卫星热红外增温前兆短临预报又取得新进展

我所强祖基研究员等与中国卫星气象中心副研究员凭常恭等合作。最 近根据卫星热红外异常特征预报10月20日至11月25日在日本北海道南部 (N39.6°--41.5°, E142.5°--144.3°)将发生7级以上地震。结果11月25日 凌晨1点在北海道东(N44.5°, E149.3°)发生M₄6.8级地震(外电报道8.5 级), 三要素預报中地点稠差,差400-500km,其它都极难,另外,12月 3、4日,又在千島群岛发生6.8、7.4、7.3和6.8级强震。被国家地震局规定 应达到二级预报标准。他们还预报今年4月16日至5月5日将在菲律宾萨马岛 Certificate of Prediction Accuracy issued by Institute of Geology, CEA

The Chinese scientists in the satellite thermal-infrared earthquake-prediction group led by QIANG Zuji and DIAN Changgong have carried on practicing short and impediment earthquake prediction for a long time. Our prediction practices started in 1990 and over the years we have made steady and great progress. During the 11 years from 1990 to 2000, we have made 149 predictions, of which 100 were valid and 49 were false alarms. Out of the 100 valid predictions, 65 were predicated with very good accuracy on the earthquakes occurred in mainland China and its neighboring sea and peninsula, including 10 earthquakes of Richter scale 7 or above, 19 of Richter scale 6 or above, and 36 of Richter scale 5 or so; 25 predictions were relatively accurate, including 4 of Richter scale 7; and 10 predictions were less accurate.

Because of the cloud interference, 49 predictions were false alarms and predictions were not made for 20 earthquakes (QIANG Zuji etal., 1998, 2001). WANG Chunying, a master graduate student of the Department of Geography at National Taiwan University, has based here thesis on our prediction practices (2005), and affirmed and gave a high appraisal to our prediction practices of more than 10 years. Based on the data of prediction cards issued for earthquakes of Richter scale 5 or above during the years 1990 to 2000, which she obtained from LI lingzhi, another collaborate researcher of our research, Ms. Wang summarized and evaluated our prediction practices in the following table. (Table II-1-1).

Table II-1-1 Statistics of Earthquake Predictions based on Thermal-Infrared Anomaly. (After WangChun-Yin NTU, 2005)

CHINESE SATELLITE EARTHQUAKE PREDICTION

AMRAAMS FOR F/A-18 INVESTIGATORS FROM CHINA'S Seismological Bureau and Satellite Meteorological Administration have told European researchers that China has used satellite infrared ocean temperature data to predict about 20 earthquakes since 1990. The technique could have significant implications for predicting earthquakes in coastal areas. The satellite data show that ocean temperatures rose 1-3C in the South China Sea 4-10 days before numerous medium and large earthquakes. Using the space-based data, Chinese researchers said they missed predicting only two earthquakes during this period and predicted only two others that failed to occur.

U. S. NAVY F/A-18s now can carry AIM-120 Advanced Medium Range Air-to-Air Missiles on operational missions. The USS Abraham Lincoln, now on station in the Arabian Gulf, has a store of AMRAAMs that will be used on Hornets participating in Operation Southern Watch over Iraq. In September, F/A-18 units in the U. S. fired 29 AMRAAMs in exercises with a success rate of 96%, McDonnell Douglas officials said. The missile, combined with the latest operational flight program, allows aircrews better situational awareness through improved dis-

The missile, combined with the latest operational flight program, allows aircrews better situational awareness through improved dis-

	quiring involvement by higher-level managers—Aerospatiale believes it will minimize the num- ber of approvals and reviews in the program, saving time and money and boosting morale.
HUGHES TO BUILD WEAPONS TRAINER	HUGHES TRAINING plans to build an F/A-18C Weapons Tactics Trainer for Finland's air force under a \$26-million contract from McDonnell Douglas. The single-seat simulator is to be de- livered in mid-1996. It will feature a 40-ft. dome and a data base that encompasses all of Finland. A Martin Marietta CompuScene 6 image generator will produce photo quality images for the day/night, head-tracked display system.
RAMJET-AIDED GYROPLANE FOR UAV ROLE	GROEN BROTHERS AVIATION will offer a version of its Hawk 2 gyroplane with ramjet-tipped rotor blades for the U.S. Navy's vertical launch and recovery unmanned aerial vehicle. The UAV is to have a range of 100-naut. mi., 5-hr. endurance and a top speed of 150 kt. with a 200-lb. payload. The UAV's role is surveillance and communications relay. The Hawk 2 is to fly primarily as a gyroplane using a pusher propeller for thrust. The design eliminates the need for a tail rotor, transmission and drive shaft.

推住1993×10	月引复加利格约路47座手航长会IAF Congress 火发言后,很
酸卷,从多	的船在美国航空利物上发表 子房礼基 1996.7.月3日

My success rate of earthquake prediction using thermal-infrared remote-sensing technology was not as good as it is now. I have had more false predictions than successful ones in the beginning. however, I have learned from my failures and kept practicing and improving this earthquake prediction technique. I believe wisdom comes from the practices.

I am confident that precursors can be found before an earthquake and that earthquake prediction IS possible. Earthquake precursors should enable a predicator to give the three elements of a future earthquake: place, magnitude and time。 (Max Wyss, 1993, former chairperson of Earthquake Prediction Committee, IASPEI).

Thank You!
