UTSA recruits highly sought faculty who are nationally and internationally recognized in their fields. Diverse scholars and researchers cultivate a challenging and research-intensive environment for students in the classroom and in laboratories.

EXCEPTIONAL STUDENTS DESERVE EXCEPTIONAL FACULTY

UTSA has a strategic faculty hiring initiative in place to accelerate the hiring of diverse, promising and accomplished faculty. In the past three years UTSA has hired more than 30 faculty to advance areas of research excellence in brain health, cybersecurity, cloud computing, analytics and data science, and artificial intelligence. As part of a new clustered and connected hiring focus, UTSA will hire 20 faculty scholars over the next two years to augment existing expertise in social and environmental challenges in Latin America, quantum information science, human performance, and virtual and augmented reality.

FACULTY SPOTLIGHT | Professor Rena Bizios

In 2015, Bizios became UTSA’s first faculty member elected to the National Academy of Medicine. In 2019, she was also inducted into the National Academy of Inventors, joining three other UTSA scholars with this distinction, including President Eighmy.
