Presents

"You are What You Eat: The role of Polysaturated Fatty Acids in Pain"

The omega-6 and omega-3 polyunsaturated fatty acids (PUFAs) are essential fatty acids as they are not synthesized by our bodies, but must be consumed in our diet. Among many other functions, several studies have implicated omega-6 PUFAs with increased pain responses and, conversely, have reported that the omega-3 PUFAs are associated with reduced pain responsiveness. This implies that dietary intake of PUFAs may serve as a risk factor or protective factor for pain conditions. Here, we will review both preclinical and clinical studies exploring this hypothesis.

Ken M. Hargreaves, DDS, PhD

Professor and Chair, Department of Endodontics,
Professor, Departments of Pharmacology,
Physiology and Surgery
UT Health San Antonio

Friday, February 18, 2022
9:00AM - 10:00AM

For information on participating in the current monthly seminar, please head to <https://www.utsa.edu/crts/strech/> or scan the QR code below.
