

Biomaterials for Soft Tissue Repair/Wound Healing

Ann Beal Salamone, Rochal Industries LLP, San Antonio, TX

Providing wound care for patients is one of the most expensive aspects of our current health care systems. An insight into skin properties, wound healing and market factors will be presented to provide a basis for biomedical product development. The unique Rochal polymers/products to be discussed are expected to assist in tissue regeneration for wound healing by minimizing pain, providing a good wound healing environment, and by reducing scar formation.
