

# What is CourseLeaf?

- **CourseLeaf** integrates Banner data into a curriculum management system with intelligent workflow: a platform for producing the catalogs, course inventory, and class schedule. UTSA uses three CourseLeaf modules:
- **CAT**—for editing and publishing the catalogs and Student Policies.
- **CIM**—for proposing, editing, and inactivating programs, courses, and academic agreements. New and updated programs and courses feed into the CAT module.
- **CLSS**—for inputting, validating, and approving course offerings by term. Used to create the class schedule from courses in our current course inventory.
