Notes on Data Table: TABLE 1. Screening indoor radon data from the State/EPA Residential Radon Survey of Texas conducted during 1990-91. Data represent 2-7 day charcoal canister measurements from the lowest level of each home tested.
Federal Sources

FEMA National Flood Hazard Layer
The National Flood Hazard Layer (NFHL) data incorporates Flood Insurance Rate Map (FIRM) databases published by the Federal Emergency Management Agency (FEMA), and any Letters Of Map Revision (LOMRs) that have been issued against those databases since their publication date. The FIRM Database is the digital, geospatial version of the flood hazard information shown on the published paper FIRMs. The FIRM Database depicts flood risk information and supporting data used to develop the risk data. The FIRM Database is derived from Flood Insurance Studies (FISs), previously published FIRMs, flood hazard analyses performed in support of the FISs and FIRMs, and new mapping data, where available.

Indoor Radon Data
Indoor radon measurements tracked by the Environmental Protection Agency (EPA) and the State Residential Radon Survey.

Public Water Systems Violations and Enforcement Data
List of drinking water violations and enforcement actions from the Safe Drinking Water Information System (SDWIS) made available by the Drinking Water Protection Division of the US EPA's Office of Groundwater and Drinking Water. Enforcement sensitive actions are not included in the data released by the EPA. Address information provided in SWDIS may correspond either with the physical location of the water system, or with a contact address.

Radon Zone Level
Areas showing the level of Radon Zones (level 1, 2 or 3) by county. This data is maintained by the Environmental Protection Agency (EPA).

Safe Drinking Water Information System (SDWIS)
The Safe Drinking Water Information System (SDWIS) contains information about public water systems as reported to US Environmental Protection Agency (EPA) by the states. Addresses may correspond with the location of the water system, or with a contact address.

Soil Survey Geographic database
The Soil Survey Geographic database (SSURGO) contains information about soil as collected by the National Cooperative Soil Survey at the Natural Resources Conservation Service (NRCS). Soil maps outline areas called map units. The map units are linked to soil properties in a database. Each map unit may contain one to three major components and some minor components.

U.S. Fish & Wildlife Service Wetland Data
The U.S. Fish & Wildlife Service Wetland layer represents the approximate location and type of wetlands and deepwater habitats in the United States.

USGS Current Topo
US Topo topographic maps are produced by the National Geospatial Program of the U.S. Geological Survey (USGS). The project was launched in late 2009, and the term "US Topo" refers specifically to quadrangle topographic maps published in 2009 and later.

USGS Geology
Seamless maps depicting geological information provided by the United States Geological Survey (USGS).

USGS National Water Information System
The U.S. Geological Survey (USGS)’s National Water Information System (NWIS) is the nation’s principal repository of water resources data. This database includes comprehensive information of well-construction details, time-series data for gage height, streamflow, groundwater level, and precipitation and water use data.

Wells from NWIS
The U.S. Geological Survey’s National Water Information System (NWIS) is the nation’s principal repository of water resources data. The NWIS includes comprehensive information of well-construction details, time-series data for gage height, streamflow, groundwater level, and precipitation and water use data. This NWIS dataset contains select Site Types from the overall NWIS Sites data, limited to the following Group Site Types only: Groundwater Group Site Types: Well, Collector or Ranney type well, Hyporheic-zone well,
Appendix

Interconnected Wells, Multiple wells; Spring Group Site Type: Spring; and Other Group Site Types: Aggregate groundwater use, Cistern.

**State Sources**

**Groundwater Database**

The Texas Water Development Board (TWDB) Groundwater Database (GWDB) contains information on selected water wells, springs, oil/gas tests (that were originally intended to be or were converted to water wells), water levels and water quality.

**Harris Galveston Subsidence District Water Wells**

List of water wells in the Harris-Galveston Subsidence District (HGSD). The HGSD was created by the 64th Texas Legislature as an underground water conservation district in 1975 to provide regulation of groundwater withdrawal to control subsidence.

**High Plains Water Wells**

Inventory of water wells in the High Plains Underground Water Conservation District No. 1 (HPUWCD), which was created in 1951. As a political subdivision of Texas, HPUWCD is charged with protecting, preserving and conserving aquifers within the District’s 16-county service area.

**Oil and Gas Wells**

Oil and Gas Well Data made available by the Railroad Commission of Texas.

**Pipelines**

Locations of interstate and intrastate gas and liquids pipelines, made available by the Railroad Commission of Texas (RRC). Data is derived from RRC T-4 Permit applications ("Application for Permit to Operate a Pipeline in Texas"), which facilitate regulatory functions of the Pipeline Safety Section of the RRC. The digital data used to create the files was taken from the forms system within the RRC, from the General Land Office (GLO) county survey maps, and, United States Geological Survey (USGS) quadrangle maps.

**Plotted Water Wells**

A list of water wells in Texas that are plotted in Texas Commission on Environmental Quality (TCEQ) Water Well Report Viewer. The database provides the best representation of water well driller's reports available to the TCEQ as of the date of records collected. Note: records are plotted using the Texas Land Survey Grid System, identifying the 2.5 minute grid where wells are located but do not contain the offset necessary to pinpoint a specific location. Therefore, plotted locations are accurate to a resolution of 2.5 minute (2-3 miles).

**Plugged Water Wells**

A list of plugged water wells from the Submitted Drillers Report (SDR) Database. This list is maintained by the Texas Water Development Board (TWDB).

**Public Water Systems Wells and Surface Intakes**

Public Water Supply Water Well Sites and Public Water Supply Surface Water Intake Sites in the State of Texas made available by the Texas Commission on Environmental Quality (TCEQ). The locations for these layers were obtained by the Water Supply Division as recorded from various sources, and the data provider indicates that some locational errors have been identified. As resources allow, TCEQ intends to improve the accuracy of these locations to meet the standards set forth in the agency’s Positional Data Policy.

**Select Wells from SDR**

Locations of wells from the Submitted Drillers Report (SDR) Database with select proposed usage: Domestic, Fracking Supply, Industrial, Irrigation, Other, Public Supply, Rig Supply, Stock, Unknown. SDR is populated from the online Texas Well Report Submission and Retrieval System (TWRSS), a cooperative Texas Department of Licensing and Regulation (TDLR) and Texas Water Development Board (TWDB) application requiring registered water-well drillers to submit reports. Excludes SDR records with the following proposed usage: Closed-Loop Geothermal, De-watering, Environmental Soil Boring, Extraction, Injection, Monitor, Test Well.

**Submitted Drillers Report Database**

The Submitted Drillers Report (SDR) Database is populated from the online Texas Well Report Submission and Retrieval System (TWRSS) which is a cooperative Texas Department of Licensing and Regulation...
Appendix

(TDLR) and Texas Water Development Board (TWDB) application that registered water-well drillers use to submit their required reports.

**Surveys**

Survey boundaries made available by the Railroad Commission of Texas (RRC). A survey is a certified measured description of a piece of land. In Texas, original surveys were performed as part of the patenting process whereby land was transferred from the public domain. These "patent surveys", recorded at the Texas General Land Office (GLO), constitute an official land grid for the State and are the basis for subsequent land surveys. The digital data used to create surveys were taken from the forms system within the RRC, from the General Land Office (GLO) county survey maps, and United States Geological Survey (USGS) quadrangle maps.

**Underground Injection Control**

List of underground injection control (UIC) permits in the Texas Commission on Environmental Quality (TCEQ) Central Registry database. Includes Class I, Class III, Class IV, Class 5, and non permitted UICs; does not include injection wells regulated by the Railroad Commission of Texas.

**Water Utility Database**

The Water Utility Database is defined as a collection of data from Texas Water Districts, Public Drinking Water Systems and Water and Sewer Utilities who submit information to the TCEQ. This database is an integrated database designed and developed to replace over 160 stand alone legacy systems representing over 5 million records of the former Texas Water Commission and the Texas Department of Health.

**Well Log Reports from Plotted Water Wells**

Locations of TCEQ Water Wells as derived from well logs in the Texas Commission on Environmental Quality (TCEQ) Water Well Report Viewer, which includes unnumbered water wells and those plotted to 2.5 minute grid locations (2-3 miles). In this collection of Well Log Reports, locations have been manually verified.

**County Sources**

**Fort Bend Subsidence District Water Wells**

List of water wells in the Fort Bend Subsidence District, boundaries of which are defined as all the territory within Fort Bend County. The Fort Bend Subsidence District was created by the Texas Legislature in 1989 as a conservation and reclamation district to control land subsidence and manage groundwater resources through regulation, conservation, and coordination with suppliers of alternative water sources to assure an adequate quantity and quality of water for the future. The District's purpose is to provide for the regulation of the withdrawal of groundwater within the District to prevent subsidence that contributes to flooding, inundation or overflow of areas within the District, including rising waters resulting from storms or hurricanes.
Reliance on information in Report: The Physical Setting Report (PSR) DOES NOT replace a full Phase I Environmental Site Assessment but is solely intended to be used as a review of environmental databases and physical characteristics for the site or adjacent properties.

License for use of information in Report: No page of this report can be used without this cover page, this notice and the project property identifier. The information in Report(s) may not be modified or re-sold.

Your Liability for misuse: Using this Service and/or its reports in a manner contrary to this Notice or your agreement will be in breach of copyright and contract and ERIS may obtain damages for such mis-use, including damages caused to third parties, and gives ERIS the right to terminate your account, rescind your license to any previous reports and to bar you from future use of the Service.

No warranty of Accuracy or Liability for ERIS: The information contained in this report has been produced by ERIS Information Inc. ("ERIS") using various sources of information, including information provided by Federal and State government departments. The report applies only to the address and up to the date specified on the cover of this report, and any alterations or deviation from this description will require a new report. CITY DIRECTORY REPORT
Project Property: UTSA Institute of Texan Cultures
IUTSA Institute of Texan Cultures
San Antonio, TX 78205

Project No: ASR22-032-00
Requested By: Raba Kistner Consultants, Inc
Order No: 22092804175
Date Completed: October 03, 2022
Thank you for contacting ERIS for a City Directory Search for the site described above. Our staff has conducted a reverse listing City Directory search to determine prior occupants of the subject site and adjacent properties. We have provided the nearest addresses(s) when adjacent addresses are not listed. If we have searched a range of addresses, all addresses in that range found in the Directory are included.

Note: Reverse Listing Directories generally are focused on more highly developed areas. Newly developed areas may be covered in the more recent years, but the older directories will tend to cover only the "central" parts of the city. To complete the search, we have either utilized the ACPL, Library of Congress, State Archives, and/or a regional library or history center as well as multiple digitized directories. These do not claim to be a complete collection of all reverse listing city directories produced.

ERIS has made every effort to provide accurate and complete information but shall not be held liable for missing, incomplete or inaccurate information. To complete this search we used the general range(s) below to search for relevant findings. If you believe there are additional addresses or streets that require searching please contact us at 866-517-5204.

Search Criteria:
700-1030 of Cesar E Chavez Blvd E
200-800 of Hwy 37
0-310 of Montana St

Search Notes:
Cesar E Chavez Blvd E is also known as Durango Blvd E. Hwy 37 is also known as Tower of the Americas Way.

Notice: IMPORTANT LIMITATIONS and YOUR LIABILITY

Reliance on information in Report: This report DOES NOT replace a full Phase I Environmental Site Assessment but is solely intended to be used as database review of environmental records.

License for use of information in Report: No page of this report can be used without this cover page, this notice and the project property identifier. The information in Report(s) may not be modified or re-sold.

Your Liability for misuse: Using this Service and/or its reports in a manner contrary to this Notice or your agreement will be in breach of copyright and contract and ERIS may obtain damages for such mis-use, including damages caused to third parties, and gives ERIS the right to terminate your account, rescind your license to any previous reports and to bar you from future use of the Service.

No warranty of Accuracy or Liability for ERIS: The information contained in this report has been produced by ERIS Information Inc. ("ERIS") using various sources of information, including information provided by Federal and State government departments. The report applies only to the address and up to the date specified on the cover of this report, and any alterations or deviation from this description will require a new report. This report and the data contained herein does not purport to be and does not constitute a guarantee of the accuracy of the information contained herein and does not constitute a legal opinion nor medical advice. Although ERIS has endeavored to present you with information that is accurate, ERIS disclaims, any and all liability for any errors, omissions, or inaccuracies in such information and data, whether attributable to inadvertence, negligence or otherwise, and for any consequences arising therefrom. Liability on the part of ERIS is limited to the monetary value paid for this report.

Trademark and Copyright: You may not use the ERIS trademarks or attribute any work to ERIS other than as outlined above. This Service and Report(s) are protected by copyright owned by ERIS Information Inc. Copyright in data used in the Service or Report(s) (the “Data”) is owned by ERIS or its licensors. The Service, Report(s) and Data may not be copied or reproduced in whole or in any substantial part without prior written consent of ERIS.

**Spill and Overfill Prevention**

- Tight Fill Fit Container/Bucket: NO
- Factory Spill Container/Bucket: NO
- Delivery Shut-Off Valve: NO
- Flow Restrictor Valve: NO
- Alarm(set@<=90%) w/3a or 3b): NO
- N/A-All Deliver to Tank<=25 gal: NO
- Comp Release Detect Compli: NO
- Piping Release Detect Compli: NO
- Spill/Overfill Prevent Compli: NO
- Comp Release Detect. Vary: NO
- Piping Release Detect Vary: NO
- Spill/Overfill Prevent. Variance: NO
- Stage 1 Vapor Recovery: NO
- Stage 1 Installation Date: |

**Piping Release Detection**

- Vapor Monitoring: NO
- Groundwater Monitoring: NO
- Secondary Barrier Monitoring: NO
- Interstitial Monitoring: NO
- Monthly Piping Tightness Test: NO
- Annual Test/Electro Monitor: NO
- Triennial Tightness Test: NO
- Auto Line Leak Detector: NO
- SIR & Inventory Control: NO
- Exempt System Suction: NO

**Piping External Containment**

- Factory Nonmetal Jacket: NO
- Synth Tnk Pit/Pipe-Tren Lnr: NO
- Tank Vault/Rigid Trench Liner: NO
- Piping Type Code: |
- Piping Type Description: |

**Piping Material**

- Steel: NO
- FRP (Fibergla Reinfor Plastic): NO
- Concrete: NO
- Steel w/External Jacket: NO
- Nonmetallic Flexible Piping: NO

**Piping Connectors & Valves**

- Shear/Impact Valves: NO
- Steel Swing-joints: NO
- Flexible Connectors: NO
### Piping Corrosion Protection Method

- **External Dielectric:** NO
- **Cathodic Protection-Fact Inst:** NO
- **Cathodic Protection-Field Inst:** NO
- **Frp Tank or Piping:** NO
- **Nonmetallic Flexible Piping:** NO
- **Open Area/2nd Containment:** NO
- **Dual Protected:** NO
- **Unec per Corr Protect Spc:** NO
- **Tank Corr Protect Compliance:** NO
- **Piping Corr Protect Compli:** NO
- **Tank Corr Protect Variance:** NO
- **Temp Out of Service Comp:** NO
- **Technical Compliance:** NO
- **Tank Tested:** NO
- **Installation Signature Date:** 04/13/1992

Description History: | REC #1: Historical use of the site as an auto facility as early as the 1950s through the early 1970s. Typical industry practices may have included the use of solvents, polychlorinated biphenyls (PCB) fluids in auto lifts, improper waste disposal, and ghost tanks not reported and registered. REC #2: Historical use of the site as a cleaner facility from at least 1941 through 1956. Typical industry practices may have included the use of solvents, improper waste disposal, and ghost tanks not reported and registered. REC #3: A tire sales and service facility adjacent to the north at 628 S. St. Mary's Street (1969 and 1971 Sanborn maps). In addition, Garden Cleaners is identified at this same address between 1935 and 1941. REC #4: An auto sales and service facility to the south at 640 S. St. Mary's Street. REC #5: Yates Laundry also identified to the southwest at 641 S. St. Mary's Street. |

**RCRA CORRACTS**
Violation/Evaluation Summary

Note: NO VIOLATIONS: All of the compliance records associated with this facility (EPA ID) indicate NO VIOLATIONS; Compliance Monitoring and Enforcement table dated Jun, 2022.

Evaluation Details

Evaluation Start Date: 20040114
Evaluation Type Description: NON-FINANCIAL RECORD REVIEW
Violation Short Description: Return to Compliance Date:
Evaluation Agency: State

Handler Summary

Importer Activity: No
Mixed Waste Generator: No
Transporter Activity: No
Transfer Facility: No
Onsite Burner: No
Smelting, Melting and Refining: No
Underground Injection Control: No
Commercial TSD: No
Used Oil Transporter: No
Used Oil Transfer Facility: No
Used Oil Processor: No
Used Oil Refiner: No
Used Oil Burner: No
Used Oil Market Burner: No
Used Oil Spec Marketer: No

Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. ERIS updates databases as set out in ASTM Standard E1527-13 and E1527-21, Section 8.1.8 Sources of Standard Source Information:

"Government information from nongovernmental sources may be considered current if the source updates the information at least every 90 days, or, for information that is updated less frequently than quarterly by the government agency, within 90 days of the date the government agency makes the information available to the public."

Standard Environmental Record Sources

Federal

Formerly Utilized Sites Remedial Action Program:

DOE FUSRAP

The U.S. Department of Energy (DOE) established the Formerly Utilized Sites Remedial Action Program (FUSRAP) in 1974 to remediate sites where radioactive contamination remained from the Manhattan Project and early U.S. Atomic Energy Commission (AEC) operations. The DOE Office of Legacy Management (LM) established long-term surveillance and maintenance (LTS&M) requirements for remediated FUSRAP sites. DOE evaluates the final site conditions of a remediated site on the basis of risk for different future uses. DOE then confirms that LTS&M requirements will maintain protectiveness.

Government Publication Date: Mar 4, 2017

National Priority List:

NPL

Sites on the United States Environmental Protection Agency (EPA)'s National Priorities List of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. The NPL, which EPA is required to update at least once a year, is based primarily on the score a site receives from EPA's Hazard Ranking System. A site must be on the NPL to receive money from the Superfund Trust Fund for remedial action. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: May 25, 2022

National Priority List - Proposed:

PROPOSED NPL

Sites proposed - by the EPA, the state agency, or concerned citizens - for addition to the NPL due to contamination by hazardous waste and identified by the Environmental Protection Agency (EPA) as a candidate for cleanup because it poses a risk to human health and/or the environment. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: May 25, 2022

Deleted NPL:

DELETED NPL

Sites deleted from the United States Environmental Protection Agency (EPA)'s National Priorities List. The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: May 25, 2022
**SEMS List 8R Active Site Inventory:**
The Superfund Program has deployed the Superfund Enterprise Management System (SEMS), which integrates multiple legacy systems into a comprehensive tracking and reporting tool. This inventory contains active sites evaluated by the Superfund program that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The Active Site Inventory Report displays site and location information at active SEMS sites. An active site is one at which site assessment, removal, remedial, enforcement, cost recovery, or oversight activities are being planned or conducted.

*Government Publication Date: Jun 30, 2022*

**SEMS List 8R Archive Sites:**
The Superfund Enterprise Management System (SEMS) Archived Site Inventory displays site and location information at sites archived from SEMS. An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time.

*Government Publication Date: Jun 30, 2022*

**Inventory of Open Dumps, June 1985:**

*Government Publication Date: Jun 1985*

**Comprehensive Environmental Response, Compensation and Liability Information System - CERCLIS:**
Superfund is a program administered by the United States Environmental Protection Agency (EPA) to locate, investigate, and clean up the worst hazardous waste sites throughout the United States. CERCLIS is a database of potential and confirmed hazardous waste sites at which the EPA Superfund program has some involvement. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The EPA administers the Superfund program in cooperation with individual states and tribal governments; this database is made available by the EPA.

*Government Publication Date: Oct 25, 2013*

**EPA Report on the Status of Open Dumps on Indian Lands:**
Public Law 103-399, The Indian Lands Open Dump Cleanup Act of 1994, enacted October 22, 1994, identified congressional concerns that solid waste open dump sites located on American Indian or Alaska Native (AI/AN) lands threaten the health and safety of residents of those lands and contiguous areas. The purpose of the Act is to identify the location of open dumps on Indian lands, assess the relative health and environment hazards posed by those sites, and provide financial and technical assistance to Indian tribal governments to close such dumps in compliance with Federal standards and regulations or standards promulgated by Indian Tribal governments or Alaska Native entities.

*Government Publication Date: Oct 25, 2013*

**CERCLIS - No Further Remedial Action Planned:**
An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. The Archive designation means that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

*Government Publication Date: Dec 31, 1998*

**CERCLIS Liens:**
A Federal Superfund lien exists at any property where EPA has incurred Superfund costs to address contamination ("Superfund site") and has provided notice of liability to the property owner. A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. This database is made available by the United States Environmental Protection Agency (EPA). This database was provided by the United States Environmental Protection Agency (EPA). Refer to SEMS LIEN as the current data source for Superfund Liens.

*Government Publication Date: Jan 30, 2014*

**RCRA CORRACTS-Corrective Action:**
RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. At these sites, the Corrective Action Program ensures that cleanups occur. EPA and state regulators work with facilities and communities to design remedies based on the contamination, geology, and anticipated use unique to each site.

*Government Publication Date: Jun 27, 2022*
**RCRA non-CORRACTS TSD Facilities:**

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. This database includes Non-Corrective Action sites listed as treatment, storage and/or disposal facilities of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA).

**Government Publication Date:** Jun 27, 2022

**RCRA Generator List:**

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Large Quantity Generators (LQGs) generate 1,000 kilograms per month or more of hazardous waste or more than one kilogram per month of acutely hazardous waste.

**Government Publication Date:** Jun 27, 2022

**RCRA Small Quantity Generators List:**

RCRA Info is the EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Small Quantity Generators (SQGs) generate more than 100 kilograms, but less than 1,000 kilograms, of hazardous waste per month.

**Government Publication Date:** Jun 27, 2022

**RCRA Very Small Quantity Generators List:**

RCRA Info is the EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Very Small Quantity Generators (VSQG) generate 100 kilograms or less per month of hazardous waste, or one kilogram or less per month of acutely hazardous waste. Additionally, VSQG may not accumulate more than 1,000 kilograms of hazardous waste at any time.

**Government Publication Date:** Jun 27, 2022

**RCRA Non-Generators:**

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Non-Generators do not presently generate hazardous waste.

**Government Publication Date:** Jun 27, 2022

**RCRA Sites with Controls:**

List of Resource Conservation and Recovery Act (RCRA) facilities with institutional controls in place. RCRA gives the U.S. Environmental Protection Agency (EPA) the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems that could result from underground tanks storing petroleum and other hazardous substances.

**Government Publication Date:** Jun 27, 2022

**Federal Engineering Controls-ECs:**

Engineering controls (ECs) encompass a variety of engineered and constructed physical barriers (e.g., soil capping, sub-surface venting systems, mitigation barriers, fences) to contain and/or prevent exposure to contamination on a property. This database is made available by the United States Environmental Protection Agency (EPA).

**Government Publication Date:** May 25, 2022

**Federal Institutional Controls- ICs:**

Institutional controls are non-engineered instruments, such as administrative and legal controls, that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy. Although it is EPA's (United States Environmental Protection Agency) expectation that treatment or engineering controls will be used to address principal threat wastes and that groundwater will be returned to its beneficial use whenever practicable, ICs play an important role in site remedies because they reduce exposure to contamination by limiting land or resource use and guide human behavior at a site.

**Government Publication Date:** May 25, 2022
Land Use Control Information System: LUCIS
The LUCIS database is maintained by the U.S. Department of the Navy and contains information for former Base Realignment and Closure (BRAC) properties across the United States.
Government Publication Date: Sep 1, 2006

Institutional Control Boundaries at NPL sites: NPL IC
Boundaries of Institutional Control areas at sites on the United States Environmental Protection Agency (EPA)’s National Priorities List, or Proposed or Deleted, made available by the EPA’s Shared Enterprise Geodata and Services (SEGS). United States Environmental Protection Agency (EPA)’s National Priorities List of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. Institutional controls are non-engineered instruments such as administrative and legal controls that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy.
Government Publication Date: May 25, 2022

Emergency Response Notification System: ERNS 1982 TO 1986
Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.
Government Publication Date: 1982-1986

Emergency Response Notification System: ERNS 1987 TO 1989
Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.
Government Publication Date: 1987-1989

Emergency Response Notification System: ERNS
Database of oil and hazardous substances spill reports made available by the United States Coast Guard National Response Center (NRC). The NRC fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. These data contain initial incident data that has not been validated or investigated by a federal/state response agency.
Government Publication Date: Jun 5, 2022

The Assessment, Cleanup and Redevelopment Exchange System (ACRES) Brownfield Database: FED BROWNFIELDS
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties protects the environment, reduces blight, and takes development pressures off greenspaces and working lands. This database is made available by the United States Environmental Protection Agency (EPA).
Government Publication Date: Aug 20, 2021

FEMA Underground Storage Tank Listing: FEMA UST
The Federal Emergency Management Agency (FEMA) of the Department of Homeland Security maintains a list of FEMA owned underground storage tanks.
Government Publication Date: Dec 31, 2017

Facility Response Plan: FRP
List of facilities that have submitted Facility Response Plans (FRP) to EPA. Facilities that could reasonably be expected to cause "substantial harm" to the environment by discharging oil into or on navigable waters are required to prepare and submit Facility Response Plans (FRPs). Harm is determined based on total oil storage capacity, secondary containment and age of tanks, oil transfer activities, history of discharges, proximity to a public drinking water intake or sensitive environments.
Government Publication Date: Dec 31, 2021

Delisted Facility Response Plans: DELISTED FRP
Facilities that once appeared in - and have since been removed from - the list of facilities that have submitted Facility Response Plans (FRP) to EPA. Facilities that could reasonably be expected to cause "substantial harm" to the environment by discharging oil into or on navigable waters are required to prepare and submit Facility Response Plans (FRPs). Harm is determined based on total oil storage capacity, secondary containment and age of tanks, oil transfer activities, history of discharges, proximity to a public drinking water intake or sensitive environments.
Government Publication Date: Dec 31, 2021
**Historical Gas Stations:**
This historic directory of service stations is provided by the Cities Service Company. The directory includes Cities Service filling stations that were located throughout the United States in 1930.
*Government Publication Date: Jul 1, 1930*

**Petroleum Refineries:**
List of petroleum refineries from the U.S. Energy Information Administration (EIA) Refinery Capacity Report. Includes operating and idle petroleum refineries (including new refineries under construction) and refineries shut down during the previous year located in the 50 States, the District of Columbia, Puerto Rico, the Virgin Islands, Guam, and other U.S. possessions. Survey locations adjusted using public data.
*Government Publication Date: Feb 4, 2022*

**Petroleum Product and Crude Oil Rail Terminals:**
List of petroleum product and crude oil rail terminals made available by the U.S. Energy Information Administration (EIA). Includes operable bulk petroleum product terminals located in the 50 States and the District of Columbia with a total bulk shell storage capacity of 50,000 barrels or more, and/or the ability to receive volumes from tanker, barge, or pipeline; also rail terminals handling the loading and unloading of crude oil that were active between 2017 and 2018. Petroleum product terminals comes from the EIA-815 Bulk Terminal and Blender Report, which includes working, shell in operation, and shell idle for several major product groupings. Survey locations adjusted using public data.
*Government Publication Date: Feb 4, 2022*

**LIEN on Property:**
The EPA Superfund Enterprise Management System (SEMS) provides LIEN information on properties under the EPA Superfund Program.
*Government Publication Date: Jun 30, 2022*

**Superfund Decision Documents:**
This database contains a listing of decision documents for Superfund sites. Decision documents serve to provide the reasoning for the choice of (or) changes to a Superfund Site cleanup plan. The decision documents include Records of Decision (ROD), ROD Amendments, Explanations of Significant Differences (ESD), along with other associated memos and files. This information is maintained and made available by the US EPA (Environmental Protection Agency).
*Government Publication Date: Jul 26, 2022*

**State**

**Superfund Sites Boundaries:**
List of sites that may constitute an imminent and substantial endangerment to public health and safety or the environment due to a release or threatened release of hazardous substances into the environment provided by the Texas Commission on Environmental Quality (TCEQ).
*Government Publication Date: Aug 10, 2021*

**State Superfund Registry:**
List of sites identified or evaluated by the Texas Commission on Environmental Quality (TCEQ) which may constitute an imminent and substantial endangerment to public health and safety or to the environment due to a release or threatened release of hazardous substances into the environment. The TCEQ updates the state Superfund sites list in accordance with the Texas Health and Safety Code (THSC). This database is state equivalent NPL.
*Government Publication Date: Aug 29, 2022*

**Delisted State Superfund Registry List:**
This database contains a list of closed hazardous substance release sites that were removed from the Texas Commission on Environmental Quality (TCEQ).
*Government Publication Date: Sep 13, 2022*

**Permitted Solid Waste Facilities:**
List of active, inactive, and post-closure Municipal Solid Waste landfills and processing facilities with issued permits and authorizations, as well as pending, withdrawn, or denied applications registered with the Texas Commission on Environmental Quality (TCEQ) under the Texas Administrative Code (TAC) Title 30 Chapter 330.
*Government Publication Date: May 18, 2022*

**Closed Landfill Inventory:**
Inventory of permitted and unauthorized closed or abandoned municipal solid waste landfills throughout Texas compiled by the Texas Commission on Environmental Quality (TCEQ), in collaboration with regional Councils of Government (COG).
**Houston-Galveston Closed Landfill Inventory:**
List of closed and abandoned landfill sites which fall under the Houston Galveston Area Council of Government. Texas Councils of Governments (COGs) are required to maintain an inventory of closed municipal solid waste landfills for their regional solid waste management plans.
*Government Publication Date: Feb 1, 2022*

**AACOG Closed Landfill Inventory:**
A list of permitted and unpermitted closed landfill sites made available by the Alamo Area Council of Governments (AACOG). Alamo Area Council of Governments (AACOG) is requested to maintain an inventory of closed municipal solid waste landfills for their regional solid waste management plans.
*Government Publication Date: Feb 6, 2020*

**Commercial Management Facilities for Hazardous Waste and Industrial Solid Wastes:**
This publication lists facilities that have permits or authorizations from the Texas Commission on Environmental Quality (TCEQ) to receive, on a commercial basis, and manage hazardous waste, industrial nonhazardous waste, or both.
*Government Publication Date: Dec 1, 2020*

**Industrial and Hazardous Waste - Receivers:**
List of active, inactive, and post-closure Industrial and Hazardous Waste Receiver Facilities permitted by or registered with the Texas Commission on Environmental Quality (TCEQ) under the Texas Administrative Code (TAC) Title 30 Chapter 335.
*Government Publication Date: Jul 21, 2022*

**Radioactive Waste Sites:**
This Texas Commission on Environmental Quality (TCEQ) database contains all sites in the State of Texas designated as Radioactive Waste sites as of 2006. The TCEQ no longer maintains this site listing.
*Government Publication Date: Jul 11, 2006*

**Leaking Petroleum Storage Tank Database:**
List of cleanup sites where contamination was caused by spills, leaks, or other releases of petroleum or hazardous substances from underground and/or aboveground storage tanks regulated by the Texas Commission on Environmental Quality (TCEQ).
*Government Publication Date: Aug 3, 2022*

**Delisted Leaking Storage Tanks:**
This database contains a list of leaking storage tank sites that were removed from the Texas Commission on Environmental Quality (TCEQ).
*Government Publication Date: Aug 3, 2022*

**Underground Petroleum Storage Tanks:**
List of facilities that have one or more Underground Storage Tank (UST)s registered and regulated by the Texas Commission on Environmental Quality (TCEQ).
*Government Publication Date: Aug 4, 2022*

**Aboveground Storage Tanks:**
List of facilities that have one or more Aboveground Storage Tank (AST)s registered and regulated by the Texas Commission on Environmental Quality (TCEQ).
*Government Publication Date: Aug 4, 2022*

**Petroleum Storage Tanks Database:**
List of facilities included on the list of tank facilities made available by the Texas Commission on Environmental Quality (TCEQ) that have no association as either underground or aboveground tanks.
*Government Publication Date: Aug 4, 2022*

**Historical Tank Construction Notification:**
A list of facilities with historic petroleum storage tank construction notification activity made available by the Texas Commission on Environmental Quality (TCEQ). Any person who intends either to install a new or replacement underground storage tank (UST), to remove a UST from the ground, to conduct a permanent abandonment in-place of a UST, or make any repairs or improvements of a UST must submit a Construction Notification Form.
*Government Publication Date: Jul 19, 2022*
Austin Underground Storage Tanks: UST AUSTIN
A list of underground gas storage tanks both current and historical from the City of Austin Open Data Portal. Data provided by Planning and Zoning, City of Austin.
Government Publication Date: Jul 19, 2022

Salt Caverns for Petroleum Storage: PETROL CAVERN
Listing of salt caverns for petroleum storage, made available by the Railroad Commission of Texas. Salt caverns, constructed in naturally occurring salt domes or salt beds, are used as storage for hydrocarbons including crude oil and natural gases.
Government Publication Date: Sep 1, 2006

Delisted Storage Tanks: DTNK
This database contains a list of storage tank sites that were removed from the Texas Commission on Environmental Quality (TCEQ).
Government Publication Date: Aug 4, 2022

Sites with Controls: AUL
Sites under several Texas Commission on Environmental Quality (TCEQ) remediation programs which have institutional or engineering controls.
Government Publication Date: Aug 11, 2022

Voluntary Cleanup Program: VCP
List of sites which have participated or are currently participating in the Voluntary Cleanup Program (VCP) administered by the Texas Commission on Environmental Quality (TCEQ). The VCP provides administrative, technical, and legal incentives to encourage the cleanup of contaminated sites in Texas.
Government Publication Date: Aug 15, 2022

Texas Railroad Commission Voluntary Cleanup Program: VCP RRC
List of facilities which have participated in or are currently participating in the Voluntary Cleanup Program (VCP) operated by the Railroad Commission of Texas (RRC). The RRC VCP provides an incentive to remediate Oil & Gas related pollution.
Government Publication Date: Aug 15, 2022

Operator Cleanup Program: OP CLEANUP
A list of sites in the Texas Railroad Commission (RRC)'s Operator Cleanup Program (OCP). The OCP, under the Site Remediation Section, is tasked with oversight of complex pollution cleanups performed by the oil and gas industry. Complex sites include those that occur in sensitive environmental areas as defined by 16 TAC3.91 (SWR 91) and may require site specific cleanup levels based on risk. When cleanup activities are successfully completed by the operator, Commission staff may issue a “No Further Action” letter acknowledging completion.
Government Publication Date: Sep 13, 2022

Innocent Owner/Operator Program: IOP
A list of sites in the Innocent Owner/Operator Program (IOP) made available by Texas Commission of Environmental Quality (TCEQ). IOP provides certificates to innocent owners or operators whom their properties are contaminated as a result of a release or migration of contaminants from a source or sources not located on the property, and they did not cause or contribute to the source or sources of contamination.
Government Publication Date: Aug 10, 2022

Brownfields Site Assessments Database: BROWNFIELD
Former industrial properties which lie dormant or underutilized due to liability associated with real or perceived contamination are broadly referred to as brownfields. The Texas Commission on Environmental Quality (TCEQ), in close partnership with other federal, state, and local stakeholders, facilitates the cleanup, transferability, and revitalization of brownfields.
Government Publication Date: Jul 4, 2022

Texas Railroad Commission Brownfields: BROWN RRC
List of sites which have participated or are currently participating in the Railroad Commission of Texas (RRC) Brownfields Response Program (BRP). The RRC BRP provides technical and financial support for redevelopment of abandoned oil and gas sites.
Government Publication Date: Aug 15, 2022

Municipal Setting Designation: MSD
Municipal Setting Designations (MSD) list is maintained by Texas Commission on Environmental Quality (TCEQ). An MSD is an official state designation given to property within a municipality or its extraterritorial jurisdiction that certifies that designated groundwater at the property is not used as potable water, and is prohibited from future use as potable water because that groundwater is contaminated in excess of the applicable potable-water protective concentration level.
**Tribal**

**Leaking Underground Storage Tanks (LUSTs) on Tribal/Indian Lands:**

Leaking Underground Storage Tanks (LUSTs) on Tribal/Indian Lands in EPA Region 6, which include Texas. There are no LUST records in Texas at this time.

*Government Publication Date: Oct 6, 2017*

**Underground Storage Tanks (USTs) on Indian Lands:**

This list of underground storage tanks (USTs) on Tribal/Indian Lands in Region 6, which includes Texas, is provided by the United States Environmental Protection Agency (EPA).

*Government Publication Date: Apr 28, 2022*

**Delisted Tribal Leaking Storage Tanks:**

Leaking Underground Storage Tank facilities which have been removed from the Regional Tribal LUST lists made available by the EPA.

*Government Publication Date: Apr 20, 2022*

**Delisted Tribal Underground Storage Tanks:**

Underground Storage Tank facilities which have been removed from the Regional Tribal UST lists made available by the EPA.

*Government Publication Date: Apr 20, 2022*

**County**

No County standard environmental record sources available for this State.

**Additional Environmental Record Sources**

**Federal**

**Facility Registry Service/Facility Index:**

The Facility Registry Service (FRS) is a centrally managed database that identifies facilities, sites, or places subject to environmental regulations or of environmental interest. FRS creates high-quality, accurate, and authoritative facility identification records through rigorous verification and management procedures that incorporate information from program national systems, state master facility records, and data collected from EPA’s Central Data Exchange registrations and data management personnel. This list is made available by the Environmental Protection Agency (US EPA).

*Government Publication Date: Nov 2, 2020*

**Toxics Release Inventory (TRI) Program:**

The EPA's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of over 650 toxic chemicals from thousands of U.S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment. One of TRI's primary purposes is to inform communities about toxic chemical releases to the environment.

*Government Publication Date: Aug 24, 2021*

**Perfluorinated Alkyl Substances (PFAS) Releases:**

List of Toxics Release Inventory (TRI) facilities at which the reported chemical is a Per- or polyfluorinated alkyl substance (PFAS) included in the Environmental Protection Agency (EPA)'s consolidated PFAS Master List of PFAS Substances. The EPA's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of over 650 toxic chemicals from thousands of U.S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment.

*Government Publication Date: Aug 24, 2021*

**PFOA/PFOS Contaminated Sites:**

List of National Priorities List (NPL) and related Superfund Alternative Agreement (SAA) sites where PFOA or PFOS contaminants have been found in water and/or soil. The site listing is provided by the Federal Environmental Protection Agency (EPA).

*Government Publication Date: Jul 18, 2022*
Perfluorinated Alkyl Substances (PFAS) Water Quality:

The Water Quality Portal (WQP) is a cooperative service sponsored by the United States Geological Survey (USGS), the Environmental Protection Agency (EPA), and the National Water Quality Monitoring Council (NWQMC). This listing includes records from the Water Quality Portal where the characteristic (environmental measurement) is in the Environmental Protection Agency (EPA)'s consolidated PFAS Master List of PFAS Substances.

Government Publication Date: Jul 20, 2020

SSEHRI PFAS Contamination Sites:

This PFAS Contamination Site Tracker database is compiled by the Social Science Environmental Health Research Institute (SSEHRI) at Northeastern University. According to the SSEHRI, the database records qualitative and quantitative data from each known site of PFAS contamination, including timeline of discovery, sources, levels, health impacts, community response, and government response. The goal of this database is to compile information and support public understanding of the rapidly unfolding issue of PFAS contamination. All data presented was extracted from government websites, news articles, or publicly available documents, and this is cited in the tracker. Disclaimer: The source conveys this database undergoes regular updates as new information becomes available, some sites may be missing and/or contain information that is incorrect or outdated, as well as their information represents all contamination sites SSEHRI is aware of, not all possible contamination sites. This data is not intended to be used for legal purposes. Limited location details are available with this data. Access the following for the most current informations https://pfasproject.com/pfas-contamination-site-tracker/

Government Publication Date: Dec 12, 2019

National Response Center PFAS Spills:

National Response Center (NRC) calls from 1990 to the most recent complete calendar year where there is indication of Aqueous Film Forming Foam (AFF) usage. NRC calls may reference AFF usage in the "Material Involved" or "Incident Description" fields. Data made available by the U.S. Environmental Protection Agency (EPA). Disclaimer: dataset may include initial or misidentified incident data not yet validated or investigated by a federal/state response agency.

Government Publication Date: Feb 23, 2022

Hazardous Materials Information Reporting System:

US DOT - Department of Transportation Pipeline and Hazardous Materials Safety Administration (PHMSA) Incidents Reports Database taken from Hazmat Intelligence Portal, U.S. Department of Transportation.

Government Publication Date: Sep 1, 2020

National Clandestine Drug Labs:

The U.S. Department of Justice ("the Department") provides this data as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy.

Government Publication Date: Apr 30, 2022

Toxic Substances Control Act:

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule. The CDR enables EPA to collect and publish information on the manufacturing, processing, and use of commercial chemical substances and mixtures (referred to hereafter as chemical substances) on the TSCA Chemical Substance Inventory (TSCA Inventory). This includes current information on chemical substance production volumes, manufacturing sites, and how the chemical substances are used. The 2006 cycle also is the first time manufacturers of inorganic chemicals were required to report basic manufacturing information.

Government Publication Date: Apr 11, 2019

Hist TSCA:

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule. The 2006 IUR data summary report includes information about chemicals manufactured or imported in quantities of 25,000 pounds or more at a single site during calendar year 2005. In addition to the basic manufacturing information collected in previous reporting cycles, the 2006 cycle is the first time EPA collected information to characterize exposure during manufacturing, processing and use of organic chemicals. The 2006 cycle also is the first time manufacturers of inorganic chemicals were required to report basic manufacturing information.

Government Publication Date: Dec 31, 2006

FTTS Administrative Case Listing:

An administrative case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.
FTTS Inspection Case Listing:  
An inspection case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

Government Publication Date: Jan 19, 2007

Potentially Responsible Parties List:  
Early in the cleanup process, the Environmental Protection Agency (EPA) conducts a search to find the potentially responsible parties (PRPs). EPA looks for evidence to determine liability by matching wastes found at the site with parties that may have contributed wastes to the site.

Government Publication Date: Jul 26, 2022

State Coalition for Remediation of Drycleaners Listing:  
The State Coalition for Remediation of Drycleaners (SCRD) was established in 1998, with support from the U.S. Environmental Protection Agency (EPA) Office of Superfund Remediation and Technology Innovation. Coalition members are states with mandated programs and funding for drycleaner site remediation. Current members are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin. Since 2017, the SCRD no longer maintains this data, refer to applicable state source data where available.

Government Publication Date: Nov 08, 2017

Integrated Compliance Information System (ICIS):  
The Integrated Compliance Information System (ICIS) is a system that provides information for the Federal Enforcement and Compliance (FE&C) and the National Pollutant Discharge Elimination System (NPDES) programs. The FE&C component supports the Environmental Protection Agency's (EPA) Civil Enforcement and Compliance program activities. These activities include Compliance Assistance, Compliance Monitoring and Enforcement. The NPDES program supports tracking of NPDES permits, limits, discharge monitoring data and other program reports.

Government Publication Date: Apr 30, 2022

Drycleaner Facilities:  
A list of drycleaner facilities from Enforcement and Compliance History Online (ECHO) online search. The Environmental Protection Agency (EPA) tracks facilities that possess NAIC and SIC codes that classify businesses as drycleaner establishments.

Government Publication Date: Jun 25, 2022

Delisted Drycleaner Facilities:  
List of sites removed from the list of Drycleaner Facilities (sites in the EPA's Integrated Compliance Information System (ICIS) with NAIC or SIC codes identifying the business as a drycleaner establishment).

Government Publication Date: Jun 25, 2022

Formerly Used Defense Sites:  
Formerly Used Defense Sites (FUDS) are properties that were formerly owned by, leased to, or otherwise possessed by and under the jurisdiction of the Secretary of Defense prior to October 1986, where the Department of Defense (DoD) is responsible for an environmental restoration. This list is published by the U.S. Army Corps of Engineers.

Government Publication Date: May 26, 2021

Former Military Nike Missile Sites:  
This information was taken from report DRXTH-AS-IA-83A016 (Historical Overview of the Nike Missile System, 12/1984) which was performed by Environmental Science and Engineering, Inc. for the U.S. Army Toxic and Hazardous Materials Agency Assessment Division. The Nike system was deployed between 1954 and the mid-1970's. Among the substances used or stored on Nike sites were liquid missile fuel (JP-4); starter fluids (UDKH, aniline, and furfuryl alcohol); oxidizer (IRFNA); hydrocarbons (motor oil, hydraulic fluid, diesel fuel, gasoline, heating oil); solvents (carbon tetrachloride, trichloroethylene, trichloroethane, stoddard solvent); and battery electrolyte. The quantities of material a disposed of and procedures for disposal are not documented in published reports. Virtually all information concerning the potential for contamination at Nike sites is confined to personnel who were assigned to Nike sites. During deactivation most hardware was shipped to depot-level supply points. There were reportedly instances where excess materials were disposed of on or near the site itself at closure. There was reportedly no routine site decontamination.

Government Publication Date: Dec 2, 1984

PHMSA Pipeline Safety Flagged Incidents:  
A list of flagged pipeline incidents made available by the U.S. Department of Transportation (US DOT) Pipeline and Hazardous Materials Safety Administration (PHMSA). PHMSA regulations require incident and accident reports for five different pipeline system types.

Government Publication Date: Jul 7, 2020
Material Licensing Tracking System (MLTS):

A list of sites that store radioactive material subject to the Nuclear Regulatory Commission (NRC) licensing requirements. This list is maintained by the NRC. As of September 2016, the NRC no longer releases location information for sites. Site locations were last received in July 2016.

Government Publication Date: May 11, 2021

Historic Material Licensing Tracking System (MLTS) sites:

A historic list of sites that have inactive licenses and/or removed from the Material Licensing Tracking System (MLTS). In some cases, a site is removed from the MLTS when the state becomes an “Agreement State”. An Agreement State is a State that has signed an agreement with the Nuclear Regulatory Commission (NRC) authorizing the State to regulate certain uses of radioactive materials within the State.

Government Publication Date: Jan 31, 2010

Mines Master Index File:

The Master Index File (MIF) is provided by the United States Department of Labor, Mine Safety and Health Administration (MSHA). This file, which was originally created in the 1970's, contained many Mine-IDs that were invalid. MSHA removes invalid IDs from the MIF upon discovery. MSHA applicable data includes the following: all Coal and Metal/Non-Metal mines under MSHA’s jurisdiction since 1/1/1970; mine addresses for all mines in the database except for Abandoned mines prior to 1998 from MSHA’s legacy system (addresses may or may not correspond with the physical location of the mine itself); violations that have been assessed penalties as a result of MSHA inspections beginning on 1/1/2000; and violations issued as a result of MSHA inspections conducted beginning on 1/1/2000.

Government Publication Date: Aug 3, 2022

Surface Mining Control and Reclamation Act Sites:

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by the Office of Surface Mining Reclamation and Enforcement (OSMRE) to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of Abandoned Mine Land (AML) impacts, as well as information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

Government Publication Date: Aug 18, 2022

Mineral Resource Data System:

The Mineral Resource Data System (MRDS) is a collection of reports describing metallic and nonmetallic mineral resources throughout the world. Included are deposit name, location, commodity, deposit description, geologic characteristics, production, reserves, resources, and references. This database contains the records previously provided in the Mineral Resource Data System (MRDS) of USGS and the Mineral Availability System/Mineral Industry Locator System (MAS/MLIS) originated in the U.S. Bureau of Mines, which is now part of USGS. The USGS has ceased systematic updates of the MRDS database with their focus more recently on deposits of critical minerals while providing a well-documented baseline of historical mine locations from USGS topographic maps.

Government Publication Date: Mar 15, 2016

Uranium Mill Tailings Radiation Control Act Sites:

The Legacy Management Office of the Department of Energy (DOE) manages radioactive and chemical waste, environmental contamination, and hazardous material at over 100 sites across the U.S. The L.M. Office manages this database of sites registered under the Uranium Mill Tailings Control Act (UMTRCA).

Government Publication Date: Mar 4, 2017

Alternative Fueling Stations:

List of alternative fueling stations made available by the US Department of Energy's Office of Energy Efficiency & Renewable Energy. Includes Biodiesel stations, Ethanol (E85) stations, Liquefied Petroleum Gas (Propane) stations, Ethanol (E85) stations, Natural Gas stations, Hydrogen stations, and Electric Vehicle Supply Equipment (EVSE). The National Renewable Energy Laboratory (NREL) obtains information about new stations from trade media, Clean Cities coordinators, a Submit New Station form on the Station Locator website, and through collaborating with infrastructure equipment and fuel providers, original equipment manufacturers (OEMs), and industry groups.

Government Publication Date: Aug 1, 2022

Superfunds Consent Decrees:

A list of Superfund consent decrees made available by the Department of Justice, Environment & Natural Resources Division (ENRD).

Government Publication Date: May 18, 2022

Air Facility System:
This EPA retired Air Facility System (AFS) dataset contains emissions, compliance, and enforcement data on stationary sources of air pollution. Regulated sources cover a wide spectrum; from large industrial facilities to relatively small operations such as dry cleaners. AFS does not contain data on facilities that are solely asbestos demolition and/or renovation contractors, or landfills. ECHO Clean Air Act data from AFS are frozen and reflect data as of October 17, 2014; the EPA retired this system for Clean Air Act stationary sources and transitioned to ICIS-Air.

**Government Publication Date:** Oct 17, 2014

**Registered Pesticide Establishments:**
List of active EPA-registered foreign and domestic pesticide-producing and device-producing establishments based on data from the Section Seven Tracking System (SSTS). The Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) Section 7 requires that facilities producing pesticides, active ingredients, or devices be registered. The list of establishments is made available by the EPA.

**Government Publication Date:** Mar 30, 2022

**Polychlorinated Biphenyl (PCB) Transformers:**
Locations of Transformers Containing Polychlorinated Biphenyls (PCBs) registered with the United States Environmental Protection Agency. PCB transformer owners must register their transformer(s) with EPA. Although not required, PCB transformer owners who have removed and properly disposed of a registered PCB transformer may notify EPA to have their PCB transformer de-registered. Data made available by EPA.

**Government Publication Date:** Oct 15, 2019

**Polychlorinated Biphenyl (PCB) Notifiers:**
Facilities included in the national list of facilities that have notified the United States Environmental Protection Agency (EPA) of Polychlorinated Biphenyl (PCB) activities. Any company or person storing, transporting or disposing of PCBs or conducting PCB research and development must notify the EPA and receive an identification number.

**Government Publication Date:** Jul 28, 2022

**State**

**Dry Cleaner Remediation Program Prioritization List:**
The Texas Commission on Environmental Quality (TCEQ) implements environmental standards for dry cleaners. The Dry Cleaner Remediation Program (DCRP) establishes a prioritization list of dry cleaner sites and administers the Dry Cleaning Remediation fund to assist with remediation of contamination caused by dry cleaning solvents. Includes prioritized sites identified under the DCRP, as well as sites closed under the DCRP.

**Government Publication Date:** Mar 1, 2022

**Registered Dry Cleaning Facilities:**
The Texas Commission of Environment Quality (TCEQ) maintains a statewide registration list of current dry cleaners.

**Government Publication Date:** Aug 23, 2022

**Delisted Drycleaning Facility List:**
A list of sites which were have been removed from the list of dry cleaning facilities registered with the Texas Commission of Environment Quality (TCEQ). Sites are removed when they are no longer used as dry cleaning facilities.

**Government Publication Date:** Aug 23, 2022

**Groundwater Contamination Cases:**
List of sites present in the TCEQ Groundwater Contamination Viewer, which represent groundwater contamination cases in Texas as per TCEQ publication SFR-056 (current and some previous years). The Joint Groundwater Monitoring and Contamination Report (SFR-056) was designed and produced by the Texas Groundwater Protection Committee in fulfillment of requirements given in Section 26.406 of the Texas Water Code. The information does not represent an on-the-ground survey and represents only the approximate relative location of property boundaries.

**Government Publication Date:** Dec 31, 2020

**Historical Groundwater Contamination Cases:**
List of sites from a Joint Groundwater Monitoring and Contamination Report provided by the Texas Commission on Environmental Quality (TCEQ) with the Railroad Commission of Texas (RRC). The annual report describes the status of groundwater monitoring activities conducted or required by each agency at regulated facilities or associated with regulated activities. The report provides a general overview of groundwater monitoring by participating members on a program by program basis. Groundwater contamination is broadly defined in the report as any detrimental alteration of the naturally occurring quality of groundwater.

**Government Publication Date:** Dec 31, 2018
**Affected Property Assessment Reports:**

List of sites for which an Affected Property Assessment Report has been submitted to the Texas Commission on Environmental Quality (TCEQ). An APAR is required when a person is addressing a release of COCs under 30 TAC Chapter 350, the Texas Risk Reduction Program (TRRP). The purpose of the APAR is to document all relevant affected property information to identify all release sources and chemicals of concern (COCs), determine the extent of all COCs, identify all transport/exposure pathways, and to determine if any response actions are necessary.

*Government Publication Date: Mar 1, 2022*

**Spills Database:**

List of Spills reported to Emergency Response Division of the Texas Commission on Environmental Quality (TCEQ).

*Government Publication Date: Jul 5, 2022*

**Per- and Polyfluoroalkyl Substances (PFAS):**

A list of sites from the Central Registry and ARTS databases where Per- and Polyfluoroalkyl substances (PFAS) containing materials may be of concern. This list is made available by the Remediation Division of the Texas Commission on Environmental Quality (TCEQ).

*Government Publication Date: May 18, 2022*

**Industrial and Hazardous Waste Sites with Corrective Actions:**

List of Industrial and Hazardous Waste sites with Corrective Actions made available by the Texas Commission of Environmental Quality (TCEQ). The mission of the industrial and hazardous waste (IHW) corrective action program is to oversee the cleanup of sites contaminated from industrial and municipal hazardous and industrial nonhazardous wastes.

*Government Publication Date: Aug 16, 2022*

**Land Application Permits:**

Texas Land Application Permits are a requirement from the Texas Commission on Environmental Quality for any domestic facility that disposes of treated effluent by land application such as surface irrigation, evaporation, drainfields or subsurface land application.

*Government Publication Date: Jul 19, 2022*

**Notice of Violation:**

List of sites that have been sent a Notice of Violation (NOV) by the Texas Commission on Environmental Quality (TCEQ) Office of Compliance and Enforcement. A Notice of Violation is sent out when a site falls out of compliance and has a prescribed time period to return to compliance.

*Government Publication Date: May 2, 2022*

**Notices of Enforcement:**

Listing of investigations resulting in a Notice of Enforcement (NOE), made available by the Texas Commission on Environmental Quality, Office of Compliance & Enforcement. Multiple violations may be due to identified noncompliance with different regulatory requirements (citations).

*Government Publication Date: Jul 5, 2022*

**Environmental Liens Listing:**

List of sites/facilities against which the Texas Commission on Environmental Quality (TCEQ) has placed liens to recover cleanup costs associated with Federal or State Superfund cleanup activities.

*Government Publication Date: Aug 11, 2022*

**Court Orders & Administrative Orders:**

List of sites that have been sent an Administrative Order or Court Order by the Texas Commission on Environmental Quality (TCEQ) Office of Compliance and Enforcement.

*Government Publication Date: Mar 21, 2022*

**Inactive Regulated RCRA Generator Facilities:**

A list of facilities which were once registered as generators of hazardous waste, but are no longer active or no longer require registration. The U.S. Environmental Protection Agency (EPA) requires the Texas Commission on Environmental Quality (TCEQ) to investigate hazardous waste generators. If an unregistered/inactive industrial site generates less than 220 pounds of hazardous or Class 1 industrial waste, it does not have to notify or report to the TCEQ.

*Government Publication Date: Mar 18, 2022*

**Recycle Texas Online Program:**

A list of recycling facilities under the Recycle Texas Online service/program made available by the Texas Commission of Environmental Quality (TCEQ). This program allowed facilities to self-report and post their own company/facility information. This program is no longer maintained and these data will not be updated.
Government Publication Date: Oct 10, 2011

**Underground Injection Control:**
List of underground injection control (UIC) permits in the Texas Commission on Environmental Quality (TCEQ) Central Registry database. Includes Class I, Class III, Class IV, Class 5, and non permitted UICs; does not include injection wells regulated by the Railroad Commission of Texas.

**Government Publication Date:** Aug 12, 2022

**Industrial and Hazardous Waste - Generators:**
List of active, inactive, and post-closure Industrial and Hazardous Waste Generator Facilities permitted by or registered with the Texas Commission on Environmental Quality (TCEQ) under the Texas Administrative Code (TAC) Title 30 Chapter 335.

**Government Publication Date:** Jul 21, 2022

**Industrial and Hazardous Waste - Transporters:**
List of active, inactive, and post-closure Industrial and Hazardous Waste Transporter Facilities permitted by or registered with the Texas Commission on Environmental Quality (TCEQ) under the Texas Administrative Code (TAC) Title 30 Chapter 335.

**Government Publication Date:** Jul 21, 2022

**New Source Review (NSR) Permits:**
A list of facilities that have applied for New Source Review air permits made available by the Texas Commission on Environmental Quality (TCEQ).

**Government Publication Date:** Aug 17, 2022

**Point Source Emissions Inventory:**
A list of Texas Commission on Environmental Quality (TCEQ) Point Source Emissions Inventory sites. The Point Source Emissions Inventory is an annual survey of chemical plants, refineries, electric utility plants and other industrial sites that meet the reporting criteria in the TCEQ emissions inventory rule (30 TAC §101.10). Exit the TCEQ

**Government Publication Date:** Apr 25, 2022

**Tier 2 Report:**
Historical listing of facilities in Texas that store hazardous chemicals and are required to report them under the Emergency Planning and Community Right-to-Know Act (EPCRA) of 1986. This data was provided by the Department of State Health Services (DSHS) and contains facility reports for the 2005 through the 2012 calendar years. Since 2012, agencies are unable to release this listing, as Tier II information is confidential under Texas Government Code Chapter 418, the Texas Disaster Act (TDA). Site specific inquiries can be made to the Texas Commission on Environmental Quality Tier II Chemical Reporting Division.

**Government Publication Date:** Dec 31, 2012

**Edwards Aquifer Permits:**
Listing of Edward Aquifer permits made available by the Texas Commission on Environmental Quality (TCEQ). The Edwards Aquifer is home to diverse fauna and is a drinking water source for the city of San Antonio and surrounding central Texas communities. Before building on the recharge, transition, or contributing zones of the Edwards Aquifer, a plan must first be reviewed and approved by the TCEQ Edwards Aquifer Protection Program.

**Government Publication Date:** May 23, 2022

**Tribal**

No Tribal additional environmental record sources available for this State.

**County**

No County additional environmental record sources available for this State.
Definitions

**Database Descriptions:** This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

**Detail Report:** This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

**Distance:** The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

**Direction:** The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

**Elevation:** The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

**Executive Summary:** This portion of the report is divided into 3 sections:

‘Report Summary’- Displays a chart indicating how many records fall on the project property and, within the report search radii.

‘Site Report Summary-Project Property’- This section lists all the records which fall on the project property. For more details, see the ‘Detail Report’ section.

‘Site Report Summary-Surrounding Properties’- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the ‘Detail Report’ section.

**Map Key:** The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of ‘1’ if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates ‘elevation’: the red inverted triangle will dictate ‘ERIS Sites with Lower Elevation’, the yellow triangle will dictate ‘ERIS Sites with Higher Elevation’ and the orange square will dictate ‘ERIS Sites with Same Elevation.’

**Unplottables:** These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

RE: Cultural Resources Desktop Study
Institute of Texan Cultures Property Condition Assessment
San Antonio, Bexar County, Texas

Dear Dr. Espy:

Raba Kistner, Inc. (RKI) is pleased to submit the attached Cultural Resources Investigations report for the above-referenced property. This report was prepared for the University of Texas, San Antonio (CLIENT), and may not provide adequate information for other purposes or parties. If other parties wish to rely on this report, please have them contact us so that a mutual understanding and agreement of the terms and conditions for our services can be established prior to their use of this information.

We appreciate the opportunity to have been of professional service on this important project. Should there be any questions or additional information required, please contact our office at your earliest convenience.

Very truly yours,

RABA KISTNER, INC.

Project Archaeologist

Assistant Director – Cultural Director

KA/AP

RABA-KISTNER, INC.
12821 West Golden Lane
San Antonio, Texas 78249

RKI Project No. ASR22-032-00

October 27, 2022
Introduction and Project Description

**Raba Kistner, Inc. (RKI)** was contracted by University of Texas, San Antonio (CLIENT) to conduct a cultural resources desktop study for the property located at 801 East César E. Chávez Boulevard, San Antonio, Bexar County, Texas (Project Area) (Figure 1). The property is owned and controlled by the CLIENT, an entity of the State of Texas. As such, improvements on the property are subject to review under the jurisdiction of the Antiquities Code of Texas (ACT) (Texas Natural Resources Code, Title 9, Chapter 191), by virtue of being a public undertaking. The ACT is regulated by the Texas Historical Commission (THC). As the Project Area is located within a City of San Antonio Office of Historic Preservation (COSA OHP) Historic District and contains all or part of two COSA OHP-designated Individual Landmarks, it is also subject to Chapter 35 of the Unified Development Code (UDC) of the City of San Antonio (COSA) (Article VI, Historic Preservation and Urban Design, COSA UDC). The COSA UDC is regulated by COSA OHP.

The Project Area comprises approximately 13.8-acres developed into the Institute of Texas Cultures. A review of current aerial imagery indicates that the Project Area was developed with a residential neighborhood prior to 1963, and that development of the property into its approximate current form was underway by 1966. The Institute of Texan Cultures comprises a large main building, several smaller auxiliary buildings, and well-maintained landscaped grounds and paved parking and driving areas (Figure 2). The Project Area is depicted on the *San Antonio East, Texas* (2998-133) United States Geological Survey (USGS) 7.5-minute topographic quadrangle map (Figure 3).

The purpose of the cultural resources desktop review is to summarize the findings of previous archaeological investigations within a 500-foot (152 meter [m]) radius of the Project Area, determine the likelihood that improvements on the property will impact significant cultural resources (prehistoric and historic archaeological sites), and provide recommendations regarding any additional field investigations that may be warranted prior to the commencement of improvement activities. This is intended to assist the CLIENT with future planning and development of the Property in regards to the known and potential archaeological resources of the property. Documentation reviewed during the course of this review included topographic maps, geological maps, a soil survey map, online historical maps, online historical and current aerial photography, the City of San Antonio-Office of Historic Preservation (COSA-OHP) online
historical district map, and previously documented archaeological sites and archaeological investigations provided on the Texas Archaeological Sites Atlas (Atlas), an online database maintained by the THC.
Figure 1. Project location within Bexar County, Texas.
Figure 2. Project Area depicted on circa 2019 aerial photograph.
Figure 3. Project Area depicted on the San Antonio East, Texas. (2998-133), Texas. U.S. Geological Survey 7.5-minute topographic quadrangle map.
Environmental Setting

The Project Area is located in the south-central Texas geographic region and within the Blackland Prairie ecoregion. The Blackland Prairie is an area of low topographic relief and poor drainage, prone to frequent flooding (Collins 1995). The Blackland Prairie physiographic region is characterized by gently undulating topography and is generally defined as grasslands punctuated by bands of riparian vegetation along creeks, rivers, and other drainages. Soils of the Blackland Prairie were generated during the Late Tertiary due to erosions of soils of the Edwards Plateau. These soils were deposited by eolian and colluvial processes across an existing, eroded parent material of the Gulf Coastal Plain, creating a mix of deep Tertiary and Quaternary calcareous clay soils (Black 1989b). Native vegetation of the Project Area consisted of prairie grasses such as big and little bluestem, Indiangrass, and switchgrass, as well as widely scattered elm, mesquite, and hackberry trees (Natural Resources Conservation Service [NRCS] 2022). Due to intense urban development, native species within the Blackland Prairie ecoregion have been substantially reduced.

Geology

The underlying geology of the APE is mapped as 100 percent Terrace deposits (Qt) of Pleistocene and Holocene age (United States Geological Survey [USGS] 2022). Terrace deposits are composed of varying proportions of sand, silt, clay, and gravel that may be locally indurated in terraces along streams. Gravel is more predominant in older, higher terrace deposits.

Soils

Soils of the Project Area are mapped as predominantly Branyon Clay with 0 to 1 percent slopes (HtA) (Figure 4). These soils formed in calcareous clayey alluvium derived from mudstone of Pleistocene age. They are moderately well drained and very slowly permeable. They are very deep (80 inches [203 cm]). Branyon clay tends be very dark gray, dark gray, gray, and light gray (NRCS 2022).
Figure 4. Soils mapped within the Project Area.
CULTURAL CONTEXT OF THE REGION

The Project Area is located at the cusp of Central Texas and South Texas archaeological regions (Pertulla 2004; Turner and Hester 1999). Based on extensive research conducted by Black (1989a and 1989b), Collins (1995, 2004), Hester (2004), Johnson et al. (1962), Prewitt (1981, 1985), Sorrow et al. (1967), Suhm (1957, 1960), Suhm et al. (1954), and Weir (1976), Central Texas has a well-established chronological sequence beginning 12,000 years ago. The sequence for South Texas is less defined, though the Project Area likely shares many of the attributes identified for Central Texas. Nonetheless, the chronological sequence of Bexar County and the vicinity is divided into four cultural periods, spanning approximately 11,500 years. Archaeologists have divided the occupation of the region into four principal periods and several sub-periods: Paleoindian (11,500–8,800 B.P.), Archaic (8,000–1,200 B.P.), Late Prehistoric (1,200–400 B.P.), and Historic (400 B.P. to present). The periods are characterized by changes in climatic conditions, distinct vegetation types and structure, and concomitant adaptive changes by human populations in hunting and gathering technologies and strategies, general material culture, and at the tail end of the cultural sequence, the arrival of non-indigenous populations.

Paleoindian Period

The oldest cultural materials found in the region date to the Paleoindian period. The period spans roughly from 11,500–8,800 B.P. (Collins 1995, 2004). The Aubrey site in Denton County has one of the earliest occupations, with radiocarbon assays dating to between 11,542 ± 11 B.P. and 11,590 ± 93 B.P. (Bousman et al. 2004:48). Paleoclimatic proxy measures suggest that a cooler climate with increased precipitation was predominant during the Late Pleistocene (Mauldin and Nickels 2001; Toomey et al 1993), the later portion of the period.

Initial reconstructions of Paleoindian adaptations typically viewed these hunter-gatherers as traversing extreme distances in pursuit of now extinct mega-fauna such as mammoth and mastodon. While these Paleoindian populations did exploit the Late Pleistocene mega-fauna when it was accessible, a number of faunal assemblages from a larger number of sites indicate that the Paleoindian diet was more varied and consisted of a wide range of resources, including small game and plants. The Lewisville (Winkler 1982) and the Aubrey sites (Ferring 2001) produced faunal assemblages that represented a wide range of taxa, including large, medium, and small species. Information on the consumption of plant resources during the
Paleoindian period is lacking. Bousman et al. (2004) reported that the late Paleoindian component at the Wilson-Leonard site reflected the exploitation of riparian, forest, and grassland species. Analysis of Paleoindian skeletal remains indicates that the diets of the Paleoindian and later Archaic hunter-gatherers may have been similar (Bousman et al. 2004; Powell and Steele 1994).

The early portion of the Paleoindian period was characterized by the appearance of Clovis and Folsom fluted projectile points that were used for hunting mega-fauna. Typical projectile points produced at sites with occupations dating to the later portion of the Paleoindian period included the Plainview, Dalton, Angostura, Golandrina, Meserve, and Scottsbluff types. Meltzer and Bever (1995) have identified 406 Clovis sites in Texas. One of the earliest, 41RB1, yielded radiocarbon assays that put the maximum age for the Paleoindian component at 11,415 ± 125 B.P. (Bousman et al. 2004:47).

Sites in Bexar County that contain Paleoindian components include St. Mary’s Hall (Hester 1978, 1990), Pavo Real (Collins et al. 2003), the Richard Beene site (Thoms et al. 1996; Thoms and Mandel 2006) and 41BX1396 (Tomka 2012). St. Mary’s Hall, 41BX229, was first encountered in 1972 during the construction of a house just outside the school’s property. The Pavo Real site, 41BX52, is located along Leon Creek in northwest Bexar County. The site was first documented in 1970 and has been investigated several times over the past 40 years (Collins et al. 2003). The Richard Beene site, 41BX831, is located along the Medina River in southern Bexar County (Thoms et al. 1996). Site 41BX1396 is located in Brackenridge Park in San Antonio, and was recorded as a result of water line installations in 2000 (Barile et al. 2002). Dating of organic samples indicated that occupation at the site occurred as early as 10,490–10,230 B.P.

**Archaic Period**

The Archaic period dates between ca. 8,800 to 1,200 B.P. It is divided into three subperiods: Early, Middle, and Late. During the Archaic, mobility strategies may have shifted to more frequent short distance movements that allowed the exploitation of seasonal resource patches. The intermittent presence of bison in parts of Texas, combined with changes is climatic conditions and the primary productivity of the plant resources may have contributed to shifts in subsistence strategies and associated technological repertoire. When bison was not present in the region, hunting strategies focused on medium to small game along with continued foraging for plant resources. When bison was available, hunter-gatherers targeted the larger-bodied prey on a regular basis.
**Early Archaic**

The Early Archaic spans from 8,800 to 6,000 B.P. (Collins 1995, 2004). Projectile point styles characteristic of the Early Archaic includes Angostura, Early Split Stem, Martindale, and Uvalde (Collins 1995, 2004). The Early Archaic climate was drier than the Paleoindian period and witnessed a return to grasslands (Bousman 1998). Mega-fauna of the Paleoindian period could not survive the new climate and ecosystems, therefore eventually dying out. Early Archaic exploitation of medium to small fauna intensified.

The excavations at the Wilson-Leonard site (41WM235) produced a wealth of cultural materials representative of a lengthy period in regional prehistory. The projectile point assemblages from the site indicate that the lanceolate Paleoindian point forms continue from the Paleoindian into the Early Archaic (Angostura). However, relatively quickly during the Early Archaic, they are replaced by corner- and basally notched and shouldered forms (Early Triangular, Andice, Bell) that quickly become the dominant points tipping the atlatl-thrown darts. In addition, the uses of small to medium hearths similar to the previous period were noted. The appearance of earth ovens suggests another shift in subsistence strategies. The earth ovens encountered at the Wilson-Leonard site were used to cook wild hyacinth along with aquatic and terrestrial resources (Collins et al. 1998). Analyses of Early Archaic human remains encountered in Kerr County (Bement 1991) reveal diets low in carbohydrates in comparison to the Early Archaic populations found in the Lower Pecos region.

**Middle Archaic**

The Middle Archaic sub-period spans from 6,000 to 4,000 B.P. (Collins 1995, 2004; Weir 1976). Archaeological data indicates that there appeared to be a population increase during this time. The climate was gradually drying leading to the onset of a long drought period. Changes to the demographics and cultural characteristics were likely in response to the warmer and more arid conditions. Projectile point styles characteristic of this sub-period include Bell, Andice, Calf Creek, Taylor, Nolan, and Travis.

Subsistence during the Middle Archaic saw an increased reliance on nuts and other products of riverine environments (Black 1989a and 1989b). The increase of burned rock middens during the Middle Archaic represented the increased focus on the use of plant resources (Black 1989a and 1989b; Johnson and
Little is known about burial practices during the Middle Archaic. An excavation in an Uvalde County sinkhole (41UV4) contained 25–50 individuals (Johnson and Goode 1994:28).

**Late Archaic**

The Late Archaic spans from 4,000 to 1,200 B.P. (Collins 1995, 2004). It is represented by the Bulverde, Pedernales, Kinney, Lange, Marshall, Williams, Marcos, Montell, Castroville, Ensor, Frio, Fairland, and Darl projectile points. The early part of the Late Archaic exhibited fluctuations in the temperature and rainfall. There appears to have been an increase in population at this time (Nickels et al. 1998).

Some researchers believe that the use of burned rock middens decreased during the Late Archaic. Some research has challenged this notion (Black and Creel 1997; Mauldin et al. 2003). Johnson and Goode (1994) discuss the role of burned rock middens in relation to acorn processing.

Human remains from burials related to the Late Archaic in Central and South Texas suggest the region saw an increase in population. This increase may have prompted the establishment of territorial boundaries, which resulted in boundary disputes (Story 1985). Human remains dating to this sub-period have been encountered near the Edwards Plateau.

**Late Prehistoric Period**

The Late Prehistoric period begins ca. 1,200 B.P. (Collins 1995, 2004), and appears to continue until the beginning of the Protohistoric period (ca. A.D. 1700). The term Late Prehistoric is used in Central and South Texas to designate the time following the end of the Archaic period. A series of traits characterizes the shift from the Archaic to the Late Prehistoric period. The main technological changes were the shift to the bow and arrow and the introduction of pottery. The Late Prehistoric period is divided into two phases: the Austin phase and the Toyah phase.

At the beginning of this period, environmental conditions were deemed to be warm and dry. Moister conditions appear after 1,000 B.P. (Mauldin and Nickels 2001). Subsistence practices appeared similar to the Late Archaic. Projectile points associated with the Austin phase include the Scallorn and Edwards types. The Toyah phase is characterized by the prominence of the Perdiz point (Collins 1995, 2004).
Most researchers concur that the early portion of the Late Prehistoric period saw a decrease in population density (Blacka 1989:32). Radiocarbon dates from some sites have indicated that the middens were utilized during the Late Prehistoric. Some archaeologists assert that the peak of midden use was after A.D. 1 and into the Late Prehistoric (Black and Creel 1997:273). Radiocarbon dates from Camp Bowie middens provide evidence that supports Black and Creel’s arguments that burned rock middens were a primarily Late Prehistoric occurrence (Mauldin et al. 2003).

Beginning rather abruptly at about 650 B.P., a shift in technology occurred. This shift is characterized by the introduction of blade technology, the first ceramics in Central Texas (bone-tempered plainwares), the appearance of Perdiz arrow points, and alternately beveled bifaces (Black 1989a:32; Huebner 1991:346). Prewitt (1981) suggests this technology originated in north-central Texas. Patterson (1988), however, notes that the Perdiz point was first seen in southeast Texas by about 1350 B.P., and was introduced to west Texas some 600 to 700 years later.

Early ceramics in Central Texas (ca. A.D. 1250 to 1300) are associated with the Toyah phase of the Late Prehistoric and are referred to as Leon Plain ware. The Leon Plain ceramic types are undecorated, bone-tempered bowls, jars, and ollas with oxidized, burnished, and floated exterior surfaces (Ricklis 1995). There is notable variation within the type (Black 1986; Johnson 1994; Kalter et al. 2005). This variation can be attributed to differences in manufacturing techniques and cultural affiliation. Analysis of residues on ceramic sherds suggests that vessels were used to process bison bone grease/fat, mesquite bean/bison bone grease and deer/bison bone grease (Quigg et al. 1993).

The return of bison to South and Central Texas during the Late Prehistoric resulted from a drier climate in the plains located to the north of Texas and increased grasses in the Cross-Timbers and Post Oak Savannah in north-central Texas (Huebner 1991). The increased grasses in the two biotas formed the “bison corridor” along the eastern edge of the Edwards Plateau and into the South Texas Plain (Huebner 1991:354–355). Rock shelter sites, such as Scorpion Cave in Medina County (Highley et al. 1978) and Classen Rock Shelter in northern Bexar County (Fox and Fox 1967), have indicated a shift in settlement strategies (Skinner 1981). Burials encountered that dated to this period often reveal evidence of conflict (Blacka 1989:32).
Historic Period

The beginnings of San Antonio came about with the establishment of Mission San Antonio de Valero in 1718. Fray Antonio de San Buenaventura y Olivares briefly visited the site several years prior, and petitioned to set up a mission at the headwaters of the San Antonio River to act as a waypoint in the journey to East Texas. The Marques de Valero, Viceroy of New Spain, granted Olivares’ request (de la Teja 1995). The mission, presidio, and villa were first established on the San Pedro Creek, the “first spring” of the San Antonio River. Mission Valero occupied at least one other location on the east side of the San Antonio River before it was moved in 1724 to its final location.

Four days after Mission Valero was founded, Presidio de Bexar was established on May 5, 1718. The presidio was to house the Spanish soldiers who had come along with the expedition to found the Mission. Typically, the families that followed the soldiers lived just outside the presidio.

Two years later, in 1720, Mission San José y San Miguel de Aguayo was established on the opposite bank of the San Antonio River, and to the south of Mission Valero and Presidio San Antonio de Bexar. This mission was established to help convert indigenous groups that did not want to reside at Mission Valero because they were not on friendly terms with groups already living there. The original location of Mission San José was along the east bank of the San Antonio River, approximately three leagues from Mission Valero. The mission was then moved to the opposite bank sometime between 1724 and 1729, and relocated to its present site during the 1740s due to an epidemic (Scurlock et al. 1976:222).

In 1722, just two years after Mission San José was founded, Mission San Francisco Xavier de Nàjera was established. The mission was to serve a group of 50 Ervipiami families that came from the Brazos River area (Schuetz 1968:11). Mission San Francisco Xavier de Nàjera was located on or near the present site of Mission Concepción. The mission was unsuccessful due to a lack of funding. An attempt was made to make the mission a sub-mission of Valero, but this failed as well (Habig 1968:78-81). Its doors closed in 1726 (Schuetz 1968:11). Ivey (1984:13) argued that the closure of the mission was due to the indigenous peoples’ lack of interest in entering mission life.

Within the next few years, three other missions were established within the San Antonio area. The remaining three missions were established in San Antonio within weeks of each other in 1731. These three missions, Mission Nuestra Señora de la Purisima Concepción, Mission San Juan de Capistrano, and Mission
San Francisco de la Espada, were originally missions established in east Texas. When each failed along the eastern border, they were moved to San Antonio.

In 1731, in addition to the five missions, Villa San Fernando de Bexar was established by the Canary Islanders. Prior to the establishment of Villa San Fernando, Villa de Bexar had been settled by 30 presidio soldiers, seven of whom were married and brought their families. Archival research indicates that upon arrival, the Canary Islanders immediately took over the land surrounding the garrison. This land was used as pasture and was originally property of Mission Valero. There had been a lack of cleared agricultural land at the time, leading Captain Juan Antonio Pérez de Almazán to allow the Canary Islanders use of the property (de la Teja 1995). The initial plan was for additional Canary Island settlers to be sent to San Antonio after the first group was established. Due to high costs to the Spanish Crown, no more groups were brought to Texas. The Canary Islanders launched a formal complaint against Mission Valero. In 1731, the Canary Islanders established their own villa, named San Fernando de Bexar, with their own church. The arrival of the Isleños resulted in the first clearly defined civilian settlement in San Antonio.

With the establishment of the San Antonio Missions, the Spanish friars used the labor of Native Americans and soldiers to construct a system of acequias (irrigation ditches) utilizing local springs, streams, and the San Antonio River to supply water for the agricultural fields of the missions, personal use, and household purposes (Cox 2005). The first acequias were simple, soil-lined, gravity-flow canals whose depressions can still be seen today in certain areas around central San Antonio (Cox 1999). This system allowed the Spanish to sustain the large population of Native Americans, settlers, and soldiers that inhabited the area.

**Bexar County**

Bexar County is one of the 23 original Texas counties formed from Mexican municipalities when Texas gained its independence in 1836. However, its earlier extent was much larger and varied through time. The county did not reach its approximate current form until around 1860, and its current geographical configuration until the 1870s (mapofus.org 2022; Long et al 2008). The county occupies 1,256.1 square miles, and its estimated population in 2021 was 2,2028,36 (County Information Program 2022). While it was named after the San Antonio de Béjar presidio, its name ultimately derives from the town of Béjar in Spain and its viceroy at the time of the presidio’s founding (bexar.org 2022). San Antonio is the original and current county seat.
Archaeological and Historical Background Review

One archaeological site intersects the Project Area, and an additional 12 archaeological sites are mapped within the 500-foot (152 m) buffer surrounding the Project Area (Figure 5).

Archaeological evidence indicates that Native American habitation of the San Antonio Area has been ongoing for at least the last 10,000 years. After Spanish settlers led construction of the *acequia* system to provide irrigation and general-purpose water starting in 1718 or 1719, the Project Area was watered by the *Acequia Madre* (also called *Acequia del Alamo*, *Alamo Acequia*, *Madre Ditch*, and *Alamo Ditch*). The Project Area was established as farmland (called *Labor de Valero*) to support Mission San Antonio de Valero (Figure 6). In 1780, the southern extent of the Project Area (*Labor de Afuera*) was granted to converted Las Adaes (Adais) tribe members (also called *adaesan*os) (Fox et al. 1997) (see Figure 6). In 1793, the former Mission San Antonio de Valero farmlands were secularized and granted to citizens. The *Labor de Afuera* portion of the Project Area was granted to Charle Concepcion and Alejandro Gortari in 1793 (McKenzie and Harville 2018). The *Labor de Valero* portion was granted to Gregorio Arciniago and Roberto Nuñez in 1794 (McKenzie and Harville 2018) (see Figure 6).

By the late 1800s, the Project Area was developed into a residential area roughly bounded by Peach, S. Center/Wyoming, 3rd/Indianola, Labor, and Victoria Streets. In the 1960s, the homes and street structure were demolished and the Project Area was developed into its approximate current configuration for HemisFair ‘68. A review of Google Earth Street View indicates that the ca. 1968 design of the Project Area included introducing substantial topographic variation as a design element.

A review of the Texas Archaeological Sites Atlas (*Atlas*) determined that one archaeological site is mapped intersecting the Project Area and one is mapped immediately east of it (THC 2022). A third archaeological site is mapped approximately 48 feet (14.6 m) northeast of it. The projected route of the *Acequia Madre* directs through the Project Area. An additional ten archaeological sites, one National Register District (NR District), one River Improvement Overlay (RIO) District, and a second projected route of the *Acequia Madre* are mapped within 500 feet (152 m) of the Project Area (see Figure 5 and Tables 1 and 2) (THC 2022). Additionally, the Project Area is located within the COSA OHP HemisFair Historic District, the area of the main Institute of Texan Cultures building and its immediate vicinity has been designated an Individual Landmark by COSA-OHP, and a second COSA-designated Individual Landmark intersects and is...
immediately adjacent to the northeastern project boundary (COSA OHP 2022). One archaeological survey is mapped within the Project Area, two intersect the Project Area, and an additional five archaeological surveys are mapped within 500 feet (152 m) of it (see Figure 5 and Table 3) (THC 2022).

Archaeological sites 41BX2044 and 41BX2045 are mapped immediately east of or intersecting the Project Area, and site 41BX2046 mapped approximately 48 feet (14.6 m) northeast of it. Site 41BX2044 is the disturbed remnants of an early to mid-twentieth century brick foundation and historic mill-cut wood that may be related to a circa 1904 structure. The site was determined to be ineligible for listing on the NRHP in 2006, and is mapped immediately east of the Project Area. Site 41BX2045 is mapped as intersecting the eastern Project Area. The site is made up of a secondary artifact deposit from a home constructed sometime between 1886 and 1896, and a wooden post from a home constructed sometime between 1904 and 1912. 41BX2045 was determined to be ineligible for the NRHP in 2016. Site 41BX2046 is the brick foundation of a segregated Black school that was founded by 1884 (San Antonio Light 1884) and named Santa Clara Public School. The building appears as a wooden frame building on the 1896 and 1904 Sanborn Fire Insurance Maps (Sanborn maps) (Figures 7 and 8), and was updated to a brick building by 1912 according to Sanborn maps (Figure 9). The school extends into the Project Area according to historical maps. The site was determined to be ineligible for the NRHP in 2016 (THC 2022).

One multi-component site (site 41BX844) is recorded approximately 409 feet east of the Project Area. The site was determined to be eligible for listing on the NRHP and designated as a SAL in 1992. Site 41BX844 is made up of a prehistoric burned rock surface, one Tonala burnished ceramic fragment (ware manufactured from 1650 to present [Potter et al 2006]), and the 1883 Roatzsch-Griessenback House, annex, and garden remnants. The remaining nine archaeological sites within 500 feet (152 m) of the Project Area comprise multiple mid-nineteenth century and later homes/structures, privies, middens, and a stone-lined well. All but one (site 41BX2047, which was determined to be ineligible for the NRHP within right-of-way [ROW] in 2016) of these additional nine sites lack NRHP eligibility determinations (see Figure 5 and Table 1) (THC 2022).

The acequia projected to direct through the Project Area is part of the multi-branched Acequia Madre/Alamo Ditch (elsewhere recorded as the NRHP-eligible archaeological site 41BX8). The Acequia Madre started construction by 1719. San Antonio’s acequias began to be filled in and abandoned by the late 1800s (Fox 1985). The portion of the acequia intersecting the Project Area was sometimes called the Beckville Ditch, as it is believed to form some of the boundaries of the Beckville settlement, an area
immediately west of the Project Area that was largely populated by Polish immigrants (Ahr and Reid 2016), but is also called **Acequia Madre/Alamo Ditch/Acequia del Alamo**. There are two projected alignments for the *acequia* within the current Project Area. The projection favored by COSA-OHP *(shown on Figure 5)* approximately parallels the southeastern face of the main Institute of Texan Cultures building, directs east and south once past the building, and then exits at the southeastern corner of the Project Area. This projection would place the lateral in the vicinity of the western extent of old Santa Clara Street and then in the vicinity of old Goliad Street. CAR-UTSA’s projection of the *acequia*’s alignment predict it to approximately parallel the northwestern side of the building, then to direct southeast just south of the center of the building (Ahr and Reid 2016). This projection would place the *acequia* lateral in the vicinity of old Newton Street and mid New City Block (NCB) 699. Ahr and Reid (2016) conducted backhoe trenching at this CAR-UTSA projected location of the Beckville Ditch within old Newton Street, but did not find evidence of the *acequia* *(page 42–46)*. A borehole dug by Arias and Associates (2013) at the COSA-OHP projected location of the Beckville Ditch found native soil that was interpreted to be *acequia* fill deposits (Ahr and Reid 2016).

The Project Area is located within the COSA-OHP designated HemisFair Historic District, located on the grounds of the 1968 HemisFair ’68 exhibition (COSA-OHP 2022). The area of the main Institute of Texan Cultures building its immediate vicinity has been designated an Individual Landmark by COSA-OHP, and a second COSA OHP Individual Landmark intersects and parallels the northeastern Project Area. The COSA-OHP designated Lavaca Historic District, containing mid-19th and later historic residences, is located approximately 45 feet (14 m) southwest of the Project Area (COSA-OHP 2022). Farther south, portions of the Lavaca neighborhood are listed as the National Register Lavaca Neighborhood Historic District (THC 2022). River Improvement Overlay (RIO) District 3 is mapped 24 feet (7.3 m) northwest of the Project Area. RIO districts are intended to protect, preserve, and enhance their environs though design standards and guidelines (COSA-OHP 2022) (see Figure 5 and Table 2).

One archaeological survey is located entirely within the Project Area (see Figure 5 and Table 3). This is recorded as a linear survey located at the approximate location of the main Institute of Texan Cultures building. No other information regarding the survey is available on the Atlas (THC 2022). An undated reconnaissance survey intersects the southwest portion of the Project Area. Information regarding this survey is limited, but the Atlas indicates that investigations were limited to a file search and literature review only, and no field investigations took place. A 2013 backhoe trench survey and construction monitoring zone intersects the northwestern Project Area; these investigations were conducted by Raba Kistner Environmental, Inc., now Raba Kistner, Inc. (RKI), under Texas Archaeological Committee (TAC) Permit No. 6517.

Five non-intersecting archaeological investigations are recorded on the Atlas (2022). In 1990, Pan American Consultants, Inc., conducted testing investigations of the area to be developed with the Alamodome. In 2014, USR Corporation/AECOM conducted survey and monitoring for the realignment of Market Street under TAC Permit No. 6507. These investigations were located immediately north and east of the Project Area, and resulted in the discovery of two intersecting to immediately adjacent archaeological sites (41BX2044 and 41BX2045), and one site in close proximity (41BX2046). RKI conducted survey and construction monitoring for the Alamodome Expansion Project in 2016 under TAC Permit No. 7664. In 2017, the Center for Archaeological Research-The University of Texas San Antonio conducted testing and construction monitoring for the Acequia Lofts Site Development Project under TAC Permit No. 7852. One linear survey with no additional information available on the Atlas is shown approximately directing around the Alamodome area (see Figure 5 and Table 3) (THC 2022).

Historic Map Review

A historic map review of the Project Area was conducted in order to assess the development of the Project Area through time. On Rullman’s 1912 map depicting San Antonio in 1837, the *Acequia Madre* is shown directing immediately southwest of the Project Area along Labor Street. The line demarcating the eastern extent of parcels is believed to represent the branch of the *acequia* that directs through the Project Area. The Project Area is depicted as within a *suerte* granted to (Charle(s) Concepcion and Alejandro Gortari and a *suerte* granted to Gregorio Arciniago and Roberto Nuñez (see Figure 6).

The 1873 Birds Eye View map shows Wyoming (S. Center/Center), Indianola (Third St), South, Wyoming, and a section of Labor Street as in place. The Project Area is depicted as sparsely developed with buildings. The 1892 Sanborn Fire Insurance Map (Sanborn Map) key shows the pre-mid-1960s street structure as in place but does not provide a detailed view of the Project Area. The 1896 Bird’s Eye View map shows that the Project Area was well developed with residential buildings, businesses, and the Santa Clara Public School at Newton and Centre Street (Wyoming Street) (see Figure 7). Rullman’s 1890 map shows lot divisions within the Project Area, as well as the Santa Clara Public School. This was a segregated Black school. The 1904 Sanborn map shows that the main building of the school had been reconfigured and three small auxiliary buildings were constructed southwest of it (see Figure 8). The 1912 Sanborn map indicates the main building of the school was rebuilt with brick, and the previous auxiliary buildings were replaced with wooden buildings comprising a cooking school, a classroom building, two restroom buildings, and an unlabeled auxiliary building (see Figure 9). The segregated school was renamed N.W. Cuney Public School by this time. The 1904 and 1912 map show increased development of the Project Area.
Figure 6. Approximate location of the Project Area on Rullman’s 1912 map displaying San Antonio in 1837.
Figure 7. Project Area projected on the 1896 Sanborn map with aerial photograph underlay.
Figure 8. Project Area projected on the 1904 Sanborn map with aerial photograph underlay.
Figure 9. Project Area projected on the 1912 Sanborn map with aerial photograph underlay.
Historic Aerial Photography Review

A review of historical aerial photography from 1955 through 2016 revealed intense changes to the Project Area. The 1955 and 1963 aerial photographs show the Project Area developed into its approximate late nineteenth century and early twentieth century street plan (Figure 10). The Project Area is shown as well developed with streets, homes, and a likely school. The 1966 photograph shows that the majority of the buildings of the Project Area were demolished by this time, and some of the streets are shown to be in poor condition. The next available photograph dates to 1973 and shows the Project Area developed into the Institute of Texan Cultures. Interstate 37 (I-37) is shown directly east of the Project Area. Later aerial photographs continue to show the Project Area largely developed into its approximate current configuration. Sometime between 1973 and 1983 or 1986, auxiliary buildings began to be installed southeast of the main building.
Figure 10. Project Area depicted on an aerial photograph from 1955.
Discussion and Recommendations

RKI was contracted by the CLIENT to conduct a cultural resources desktop review for the property located at 801 East César E. Chávez Boulevard, San Antonio, Bexar County, Texas. This property is owned and controlled by the CLIENT, an entity of the State of Texas. As such, it is subject to review under the Antiquities Code of Texas (ACT) (Texas Natural Resources Code, Title 9, Chapter 191). The THC has the responsibility of regulating the ACT. As the Project Area is located within the COSA-OHP designated HemisFair Historic District and contains all or part of two COSA OHP Individual Landmarks, it is also subject to review under Chapter 35 of the Unified Development Code (UDC) of the City of San Antonio (COSA) (Article VI, Historic Preservation and Urban Design, COSA UDC). The COSA UDC is regulated by the City of San Antonio Office of Historic Preservation (COSA OHP).

The cultural resources desktop review determined that one archaeological site intersects the Project Area, one is recorded immediately east of it, and third archaeological site recorded approximately 48 feet (14.6 m) northeast of it. An additional ten archaeological sites are recorded within 500-feet (152 m) of the Project Area. No acequia has been recorded within the Project Area, but a branch of the Acequia Madre/Alamo Ditch is projected to intersect the Project Area based on historic sources. The Project Area is located within the COSA-OHP designated HemisFair Historic District and contains two COSA OHP Individual Landmarks. The historic NR and COSA-OHP Lavaca Historic District and the RIO-3 District are located within 500 feet (152 m) of the Project Area. One archaeological investigation is located within the Project Area, two intersect it, and an additional five archaeological investigations are located within 500 feet (152 m) of the Project Area. No additional information regarding the investigation within the Project Area is available, so its negative findings cannot be relied upon, but the remaining seven investigations within 500-feet (152 m) of the Project Area indicate that archaeological remnants of historic habitation are common in the area, and prehistoric cultural deposits may also be present.

Review of historic maps, archival resources, and aerial photographs indicate that the Project Area was developed into a residential neighborhood by the late 1800s. In the 1960s, homes and other structures within the Project Area were demolished and the Project Area was developed into its approximate current configuration for HemisFair ’68. Substantial topographic variation was introduced to the Project Area as part of this development.
Overall, the desktop review determined that the Project Area has not been reliably surveyed for archaeological resources and that there is a high potential for archaeological resources within the Project Area. RKI recommends archaeological investigations of ground disturbing activities within the Project Area. However, the OHP and the THC will make the final determination regarding the need for and the extent of archaeological investigations that may or may not be needed within the Project Area. RKI recommends that the client transmit this document to the reviewing agencies for consideration and an evaluation of its recommendations.
