What do I do if I had close contact with someone who tests positive for COVID-19?

☐ SUBMIT A COVID-19 CASE REPORT
  » utsa.edu/selfreport

☐ GET TESTED FOR COVID-19 5 days after exposure or right away if you develop COVID-19-like symptoms.
  » utsa.edu/gettested

☐ CONSULT WITH WELLNESS 360 ON YOUR RETURN TO IN-PERSON CLASS DATE. Wellness 360 will contact you after you submit the COVID-19 Case Report.

☐ COOPERATE WITH THE COVID-19 RESPONSE TEAM. Once you submit your COVID-19 Case Report, the COVID-19 Response Team begins a case investigation and will reach out to you for contact tracing for close contacts within the UTSA community.

If you are living on campus and your roommate tests positive for COVID-19...

☐ FOLLOW THE STEPS ABOVE.

☐ HOUSING STAFF WILL EVALUATE THE SITUATION to determine next steps. Impacted residents may be quarantined on a case-by-case basis. Isolation is only necessary for positive/symptomatic cases.

☐ IF YOU LIVE WITH ROOMMATES, notify them so they can monitor their symptoms and avoid contact.

☐ WE RECOMMEND WEARING A FACE COVERING INSIDE YOUR LIVING UNIT. Clean and disinfect all points of contact.

 Definitions:

CLOSE CONTACT: Someone who was within 6 feet of an infected person for a total of 15 minutes or more over a 24-hour period. Walking past a COVID positive individual, even several times, does not constitute a close contact.

QUARANTINE: Keeps someone who was in close contact with someone who has COVID-19 away from others.

ISOLATION: Keeps someone who is sick or tested positive for COVID-19 without symptoms away from others, even in their own home.

Watch for common COVID-19 symptoms, including:

☐ FEVER
☐ COUGH
☐ SHORTNESS OF BREATH
☐ FATIGUE

Symptoms may appear 2-14 days after exposure.
