

Public Health Task Force

This task force will help to guide the tactical teams as they explore how best to protect the health of the UTSA community as an integral part of the planning for re-opening UTSA's campuses this fall.

Using guidance from **UT System** and the **State of Texas**, the work of the Public Health Task Force is critical to addressing the health and safety of our students, staff and faculty.

The Public Health Task Force will work with a three-member **Public Health Expert Advisory Group** to develop standards and practices specific to UTSA operations regarding personal protective equipment, social distancing, contact tracing, testing, groups at risk and related matters.

The task force, in turn, will provide important input to the **Tactical Teams** about implementing these public health best practices.
