

Connecting to Eduroam for Android

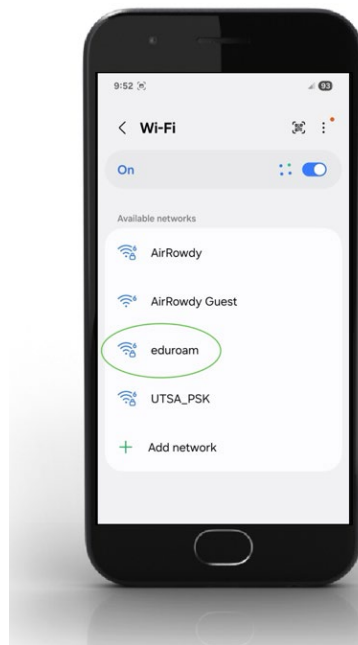

1 Open the **Settings** app on your Android device

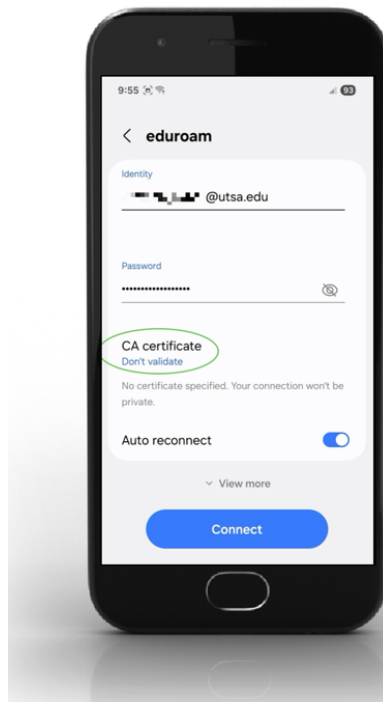

2 Tap **Connections** from the Settings menu

3 Ensure Wi-Fi is enabled, then tap **Wi-Fi** to view all available wireless networks

- 4** Locate and tap **eduroam** from the list of available networks to begin the connection process

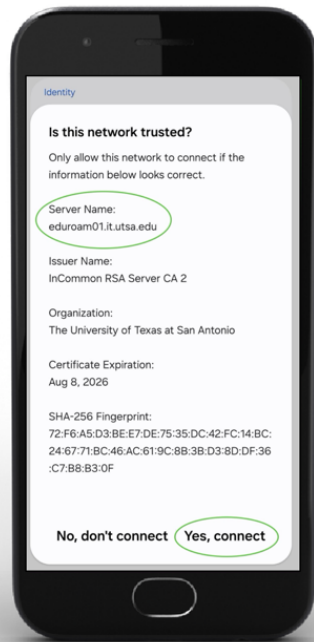

- 5** Enter your university email credentials:

- **Username:** Your university email address
- **Password:** Your email account

- 6** For certificate validation, select **Do not validate** or **No certificate**

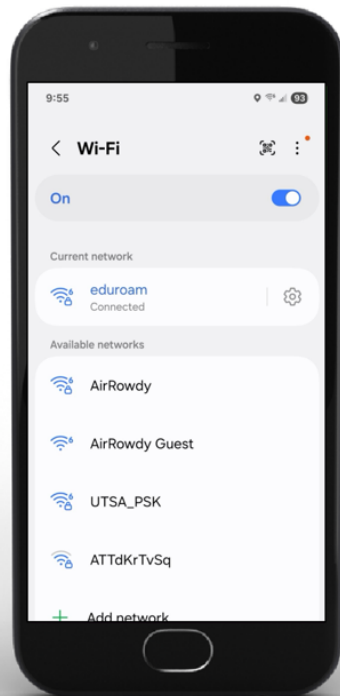

- 7** Tap **Connect** to complete the connection process

Note: Android handles Eduroam certificates differently than other platforms. Disabling certificate validation for this connection is typically required.

8 When prompted, your device will indicate the certificate is not yet trusted. Verify the authentication server reads **"eduroam01.it.utsa.edu"**.

9 Press **Yes, connect** to send your credentials to the server and allow you onto the Eduroam network.

10 Verify successful connection by confirming the **Connected** status appears next to eduroam in the Wi-Fi settings, and the Wi-Fi symbol appears in the status bar
